THE MISSING ACCOUNT OF
PROGRESSIVE CORPORATE CRIMINAL LAW

William S. Laufer*

INTRODUCTION

This seems to be an ideal time to revisit the normative, doctrinal, and policy-laden foundations of the corporate criminal law. With renewed calls for a repeal of the most costly of corporate regulations and reforms, it is tempting to speculate about the future of corporate compliance and corporate criminal liability. A host of academics continue to worry about the many hard-to-quantify direct and collateral costs of corporate criminal liability. Regulators and legislators still question whether some financial institutions are too big to prosecute, take to trial, and convict. The general public fears

*Julian Aresty Professor, Professor of Legal Studies and Business Ethics, Sociology, and Criminology; Director, Carol and Lawrence Zicklin Center; The Wharton School, University of Pennsylvania (J.D., Ph.D.). Thanks to Vik Khanna, Jennifer Arlen, Sally Simpson, John Hagan, Eric Orts, Peter Conti-Brown, Mihailis E. Diamantis, Ron Levine, Steve Solow, Kip Schlegel, Eduardo Saad Diniz, and Dominik Brodowski for comments on earlier versions of this article. My appreciation to Serina Vash and The Program on Corporate Compliance and Enforcement at NYU Law School for their post of this Article.

1 See, e.g., Tom Fox, TRUMP AND COMPLIANCE: THIS CONVERSATION IS JUST GETTING STARTED (2016) (discussing the future prospects of the Foreign Corrupt Practices Act); Robert Hahn, Playing the Long Game on Regulation, BROOKINGS, January 13, 2017 (available at: https://www.brookings.edu/opinions/playing-the-long-game-on-regulation/); Bill Coffin, What’s Next for Compliance Under President Trump? COMPLIANCE WEEK, November 16, 2016 (speculating on how a Trump presidency will affect the compliance industry); Ben Dipietro, Does Trump Spell End of ‘Era of Compliance’? WALL STREET JOURNAL, November 21, 2016; Bruce Carton, What Does President Trump Mean for the SEC? COMPLIANCE WEEK, November 9, 2016; Ben Rossi, What Brexit and Trump Mean for Compliance, INFORMATION AGE, December 6, 2016; Jacob M. Schlesinger, Donald Trump Took Aim at Dodd-Frank on the Stump, WALL STREET JOURNAL, November 9, 2016

that justice for those individuals responsible for the global debt crisis will remain undistributed.\(^4\) Entity liability, we are told by the Department of Justice, should take a back seat to individual liability unless justice may not be accomplished otherwise.\(^5\)

These conventional intuitions, musings, and fears are found scattered in four relatively distinct ideological camps. First, there are \textit{stalwart advocates} of both individual and entity liability for “corporate” wrongdoing. For some, corporate social controls are seen as a condition precedent to achieving justice with wayward and rogue capitalists.\(^6\) This camp is agnostic to the idea of corporate personhood, embraces the discretionary use of parallel individual and entity liability, and is not motivated by any particular penal philosophy.\(^7\) What matters is accountability for those responsible in the form of criminal liability.\(^8\)

A second faction of sharply witted neoconservatives and right-of-center \textit{corporate libertarians} regularly call on Congress to roll back the litany of federal criminal provisions and laws, including burdensome corporate

\footnotesize{

regulations with criminal penalties. The allergy of some committed conservatives to the illogical metaphysics of a corporate criminal law is expressed with a genuine disbelief about anthropomorphizing the firm. Their core concern, though, has nothing to do with complex questions of corporate ontology. It is all about unjustifiable externalities. This century-old fiction of corporate criminal liability was crafted at a time when there was no recognizable regulatory state and misfeasance in railroad travel across state lines was the pressing federal concern. Today, over-criminalization is of far greater concern than ensuring threshold levels of criminalization.

11 The outcome of this conservative and neoliberal position is a familiar and somewhat old abolitionist rant, see: Gerhard O.W. Mueller, Mens Rea and the Corporation: A Study of the Model Penal Code Position on Corporate Criminal Liability, 19 U. PITT. L. REV. 21 (1957) (“Many weeds have grown on the acre of jurisprudence which has been allotted to the criminal law. Among these weeds is… corporate criminal liability…. Nobody bred it, nobody cultivated it, nobody planted it. It just grew.”); Jeffrey S. Parker, Doctrine for Destruction: The Case of Corporate Criminal Liability, 17 MANAGERIAL & DECISION ECON. 381 (1996). For a discussion of the interstate expansion of the railroads and early calls for federal incorporation, see: J. Newton Baker, Regulation of Industrial Corporations, 22 YALE L.J. 306 (1913); Frederick H. Cooke, State and Federal Control of Corporations, 23 HARV. L. REV. 456 (1910) (discussing the relative benefits of state versus federal control); Max Thelen, Federal Incorporation of Railroads, 5 CAL. L. REV. 273 (1917) (arguing against existing plans and proposals for a federal incorporation law); H. L. Wigus, The Need for a National Incorporation Law, 2 MICH. L. REV. 359 (1904) (arguing in favor of a national incorporation law); William E. Church, The Tramp Corporation, 5 AM. LAW. 13 (1903) (discussing the concern over issues of state sovereignty and unbridled corporate power). Not so coincidentally, turn of the century progressives were thinking of how science could inform better management, see W. J. Cunningham, Scientific Management in the Operation of Railroads, 25 THE QUARTERLY JOURNAL OF ECONOMICS, 539 (1911); H. B. Drury (1915), SCIENTIFIC MANAGEMENT: A HISTORY AND CRITICISM (1915); S. Haber, EFFICIENCY AND UPLIFT, SCIENTIFIC MANAGEMENT IN THE PROGRESSIVE ERA, 1880-1920 (1964).

A third group seeks justice for wrongdoing in corporations, but rejects the idea of corporate moral agency.13 These commentators, though, set their normative sights on the attribution of moral agency to corporate functionaries who are most deserving.14 Moral agency should not attach to any agent positioned in the corporate hierarchy. For normative thinkers, the criminal law reaches only high-level managers, responsible corporate officers, or blameworthy members of the board of directors.15

The final contingent includes a small cadre of critical criminologists who see important relations between the state and the private sector that compromise regulatory decision making, distort the construction of what is labeled criminal, and misattribute who, ultimately, is justly to blame for corporate wrongdoing.16 This often maligned collection of intellectual disobedients is long on critiques of positive theories, short on practical regulatory solutions, and quite justifiably motivated by fiery rhetoric.17

This Article explores an overlooked and largely missing progressive account of corporate criminal liability. This account builds a bridge between some of the foundational principles of twentieth century progressivism and its varied contemporary iterations. The structure of the bridge consists of compliance principles and regulatory instruments—an artifact of how corporate criminal law is translated into regulatory practice. The central role of science, scientific management, and associated social controls define the

bridge’s architecture. The hope is that these connections might inspire a new generation of modern progressives to assume these foundational principles in combatting regulatory convention and taming wrongdoing corporations.\textsuperscript{18} Far less ambitious and important, it seems fair to say that the scholarly playing field is less-than-level without the recognition of some progressive principles, if not advocacy.

The construction of this bridge is, admittedly, treacherous.\textsuperscript{19} There is wide ranging historical criticism of the ideas and positions of progressivism, and the real contours of the “progressive movement.”\textsuperscript{20} One should be cautious in looking for solid ground from the early 1900s that might support the weight of a “modern” progressivism. It is jarring to see that some widely-held progressive policies were both regressive and reactionary.\textsuperscript{21} If given the latitude to parse progressivism, a focus on the place of science, science management, social control, and the power of law to address social welfare resonate today in ways that make this bridge so very irresistible.\textsuperscript{22} It is also powerfully attractive because of the reticence of present-day progressives to embrace their intellectual heritage while pursuing legal, regulatory, and government reforms that would result in greater corporate responsibility and

\textsuperscript{18} Some progressives find important parallels and differences between an old and possibly new progressivism. See, e.g., Paul Glastris, \textit{Why a Second Progressive Era Is Emerging and How Not to Blow It}, \textit{Washington Monthly}, January/February, 2015 (available at: http://washingtonmonthly.com/magazine/janfeb-2015/why-a-second-progressive-era-is-emerging-and-how-not-to-blow-it/ (“As many observers have noted, there are arresting parallels between our age and the 1890s, the dawn of the Progressive Era.”) A share of the inspiration for the more modern account of progressivism in this Article comes from Ralph Nader, Mark Green, Joel Seligman, and Christopher Stone, See, e.g., Ralph Nader, \textit{The Consumer and Corporate Accountability} (1973); Ralph Nader and Mark J. Green, \textit{Corporate Power in America} (1973); Ralph Nader, Mark Green, and Joel Seligman, \textit{Taming the Giant Corporation: How the Largest Corporations Control Our Lives} (1976); Christopher Stone, \textit{Where the Law Ends: The Social Control of Corporate Behavior} (1975)

\textsuperscript{19} See, e.g., Michael McGerr, \textit{A Fierce Discontent: The Rise and Fall of the Progressive Movement in America} (2003)

\textsuperscript{21} In forthcoming work, Prof. Hovenkamp offers an appropriately critical take the role of race in the old progressive movement. See, Herbert Hovenkamp, \textit{Racism and Public Law in the Progressive Era}, unpublished paper, October, 2016

\textsuperscript{22} The essence of the progressive movement in law is well captured by Herbert Hovenkamp, \textit{The Mind and Heart of Progressive Legal Thought}, 81 \textit{Iowa L. Rev} 149, 150 (1995).
accountability.\textsuperscript{23} Modern progressive voices on how the criminal law may tame corporate wrongdoing are rarely, if ever heard, and vastly overshadowed by a coherent and well-conceived slate of progressive reforms to corporate governance.\textsuperscript{24}

Part I of this Article explores the missing account of progressivism in the substance and practice of corporate criminal law. This is followed by a recognition of a remarkable convergence of corporate compliance technology, standards, measures, practices, and insights from conventional, plural, and polycentric theories of regulation. This is a convergence of informal corporate social controls that offers a significant opportunity for the adoption of progressive interests, practices, and advocacy.

Part II provides some reasons for the consideration of progressive ideals in corporate criminal law, from our collective failure to express moral indignation over corporate wrongdoing to the value of justifying this body of law in theories of desert. Next, the two pillars of twentieth century progressivism, the instrumental use of science and social control, are explored. Measures of both corporation and government control dominated progressive proposals for reform.\textsuperscript{25} Progressive principles borrowed from the last century should support the consolidation of more rigorous compliance measures, measurement, and standards into formal regulatory policies. Progressive thinking about new models of regulatory-regulated engagement

\textsuperscript{23} See Glastis, supra note at (“But for the most part today’s left-leaning progressives are almost entirely focused on politics, economic justice, social issues, and the influence of money in politics. These are important subjects. But the vast complex of government is largely a black box to these folks.”); Herbert Hovenkamp, Appraising the Progressive State, ___IOWA LAW REV.____ (2017)

\textsuperscript{25} See, Benjamin Parke DeWitt, The Progressive Movement: A Non-Partisan Comprehensive Discussion of Current Tendencies in American 113-161 (1915) (discussing how progressive’s view the rise and concentration of American business, along with the role of government)
also are reviewed with an appreciation for the many challenges accompanying the coordinated delegation of regulation to firms.26

A “compliance conundrum,” it is argued, undermines corporate commitments to compliance science, technology, cooperation, and more effective social controls. This conundrum reflects a deeply imbedded conflict in firms over how to diligently identify deviance, recognize the inevitability ofbase rate of wrongdoing, honor disclosure requirements and, at the same time, avoid entity liability. This conundrum facilitates a “compliance game,” a regulatory status quo where both corporate and government players are, at times, equally captured. The result is that all stakeholders placate each other with compliance expenditures that are largely incidental to ensuring compliance. This game is marked by disincentives for firms to take the measurement of compliance seriously, and a regulatory lethargy to resort to and require anything resembling a compliance science. This game is profitable for many stakeholders, including an ever-burgeoning legion of compliance, regulatory, and legal risk professionals. It does, however, take casualties, including the legitimacy of formal social controls that regulate firms, particularly for corporations of scale and power. Ultimately, the most significant loss is one of justice undone, or undistributed corporate criminal justice.27 With a glimmer of hope and small dose of optimism, this Article concludes by considering the unique position of modern progressives to promote corporate criminal justice by disrupting the compliance game and addressing the conundrum.

I. WHAT IS MISSING IN CORPORATE CRIMINAL LAW?

In the entrenched and divergent accounts of corporate criminal law there is a need for a reasonable counter to entity liability naysayers, an alternative to abolitionism that offers more than simple and unfounded hypotheses of how the criminal law deters corporations.28 Also missing in

27 For more on the notion of an “undistributed” justice, Laufer supra note

these divergent accounts—from the positions of stalwart advocates to normative thinkers—is an antidote to the kind of corporate regulation that encourages compliance expenditures to run wild and unaccounted for as untested proxies of organizational due diligence.\textsuperscript{29} Absent is a desert-based account that captures the moral indignation that stakeholders have, or should have, with the corporate malfeasance of large and powerful private sector institutions.\textsuperscript{30} It is also difficult to find any regulatory approach, including those taken by creative “new governance” theories, with even a marginal chance of being integrated into existing “hard law” practices.\textsuperscript{31}

Governmental prescriptions, it is argued, encourage the kind of due diligence imagery, rhetoric, and posturing that staves off the regulatory scrutiny necessary to fairly and justly oversee firm behavior. See, e.g., William S. Lauffer, \textit{Integrity, Diligence, and the Limits of Good Corporate Citizenship}, 34 AM. BUS. L. J. 157 (1996)

\textsuperscript{30} See William S. Lauffer and Alan Strudler, \textit{Corporate Intentionality, Desert, and Variants of Vicarious Liability}, 37 AM. CRIM. L. REV. 1285 (2000) (arguing for the importance of a desert-based account)

As concerning, there is no coherent justification for why criminal justice expenditures so generously support the policing, processing, and confining of people of color from urban populations of the disenfranchised and disaffiliated poor.\textsuperscript{32} Government expenditures are decidedly tilted toward aggressively pursuing the poor and away from giving priority to bringing institutional offenders of scale and means to justice.\textsuperscript{33} This is not to suggest that local and municipal policing expenditures are not needed or unjustifiable. The point is simply that the scarcity of local, state, and federal resources to investigate, pursue, and combat corporate deviance, relative to street crime, requires a far more thoughtful and careful explanation. Such tilted expenditures should not go unchallenged.\textsuperscript{34}

Beyond government expenditures, advances in urban policing strategies, supported by sophisticated mapping and extensive data from evidence-based and place-based criminology, have no equivalent in the identification, investigation, and prediction of corporate offenses and offenders.\textsuperscript{35} The failure to learn and heed lessons from the science on

\begin{footnotesize}

\textsuperscript{33} Local and state criminal justice expenditures dwarf federal expenditures across the criminal process, see, e.g. \textit{Justice System Direct and Intergovernmental Expenditures, SOURCEBOOK OF CRIMINAL JUSTICE STATISTICS} (2016) (available at: http:// www. albany. edu/ sourcebook /pdf /t13.pdf). Backing in and out of state and federal data yield the same result: A simply overwhelming expenditure of criminal justice resources on street crime relative to corporate crime.

\textsuperscript{34} William J. Chambliss, \textit{POWER, POLITICS, AND CRIME} (1999) (discussing class and race-based reasons for an expansion of the criminal justice bureaucracy); Jeffrey Reiman and Paul Leighton, \textit{THE RICH GET RICHER AND THE POOR GET PRISON: IDEOLOGY, CLASS, AND CRIMINAL JUSTICE} (2015) (reviewing the ways in which resources are disparate)

intelligence-led policing street crime is conspicuous.\textsuperscript{36} This same point may be made about all evidence-based advances at each and every stage of the criminal process, including the successful interventions, treatments, reforms, and strategies chronicled in the Campbell Collaboration’s systematic reviews of experimental research.\textsuperscript{37}

Lost in nearly any consideration of corporate criminal law is a rigorous victimology of corporate wrongdoing. There are distinct costs in failing to recognize the many stakeholders of corporate wrongdoing; what role victim/stakeholders harm should play in a deterrence or desert driven criminal justice system; and what advances in the field of victimology, more generally, may offer the corporate criminal law. Evidence and principles from corporate victimology must be an inextricable part of the corporate criminal law.

Finally, corporate criminal law remains decidedly personal, even in its vicarious form. The substantive law, however, lags our understanding of the complexity of organizational life and organizational science. Moreover, policies associated with its use remain ill-conceived, and there is at best a half-hearted embrace of compliance science by those inside and outside of the firm, those entrusted with policing and ensuring the compliance function. Resisting the kind of compliance science that recognizes and supports the idea of an enterprise fault is at the core of what is missing in all accounts.\textsuperscript{38}

The hesitance to see advances in compliance science and technology as an opportunity to more fairly regulate, to be bound by reasonable and measured social controls, and to aspire to more creative innovations in regulation has roots in a longstanding ambivalence with the attribution of fault to corporations. This ambivalence is quite defining for each and every compliance stakeholder.\textsuperscript{39}

Shining light on what is missing in corporate criminal law highlights limitations in doctrine, philosophy, and practice. It is not an exaggeration to

\textsuperscript{37} \textit{See}, Campbell Collaboration (https://campbellcollaboration.org/library.html)

\textsuperscript{39} \textit{See}, Laufer \textit{supra} note at
say that this body of law is without a firm and coherent normative foundation. The criminal law that is applied to corporations is nothing more than a patchwork of largely disregarded black letter principles of vicarious fault tacked together with an inconsistent set of prescriptive prosecutorial and sentencing guidelines. The discretionary use of these guidelines by prosecutors determines charging and, thus, plea agreements, sentencing outcomes, and post-sentencing practices. That prosecutorial discretion governs the entire criminal process is concerning for a host of reasons, not the least of which is that courts rarely have an opportunity to rule on substantive points of corporate criminal law, and legislatures fail to touch and mature its general part. Practitioners and academics thirst for federal and state decisional law that will begin to recognize basic fault principles. What they get instead is a corporate criminal law that is all too often conflated into canned compliance programs, practices, and functions that are played as a multi-stakeholder game. When black letter law is applied, it is done so differently for firms that are small versus those of any scale whose prosecution may bring about significant collateral consequences, or even systemic risk. That the playing field is still not level for small and big firms strongly should exercise both old and more modern progressives.

Unfortunately, for those looking for regulatory accountability, there are few good alternatives to wholly embracing or completely rejecting this unorthodox patchwork of criminal liability. For those seeking to account for the decentered and plural nature of corporate regulation with new governance approaches, regulators offer no hint of relinquishing their formal grip on a brand of discretionary oversight and treatment of organizational

40 See Laufer, supra note 1 at xiii (“We are left with century-old liability rules that are resurrected for reasons of prosecutorial convenience or symbolic need. The only substantive reform came in piecemeal fashion or through the back door of sentencing and prosecutorial guidelines.”) For cases following Hudson, see: William S. Laufer, Corporate Liability, Risk Shifting, and the Paradox of Compliance, 52 VAND. L. REV. 1341 (1999)
41 See, e.g., Laufer, supra note 1 at xiii (“We are left with century-old liability rules that are resurrected for reasons of prosecutorial convenience or symbolic need. The only substantive reform came in piecemeal fashion or through the back door of sentencing and prosecutorial guidelines.”)
42 For a very insightful review of post-sentencing reforms, see Brandon L. Garrett, Structural Reform Prosecution, 93 VA. L. REV. 853 (2007)
actors that is often arbitrary, largely symbolic, and frequently determined by firm size and power.\textsuperscript{46} For those looking to account for the influence of our complex political economy on the administration of corporate criminal law, there are sadly no reasonable alternatives.\textsuperscript{47} And literally nothing is in public law for those interested in a new and more expansive regulatory architecture to accommodate the players and stakeholders of our interconnected global markets, e.g., models of private regulation, collaborative governance, and regulatory capitalism.\textsuperscript{48} There is little choice but to hold on to the faint promise that regulators will coordinate with their counterparts around the world.\textsuperscript{49}

Sadly, without obvious alternatives, regulatory and compliance costs continue to grow in ways disconnected—or not sufficiently connected—with legal requirements, regulatory risks, and actual compliance failures.\textsuperscript{50} Conservative beltway think tanks estimate that the costs of federal regulations to the private sector exceed $1.80 trillion annually.\textsuperscript{51} They reason that if

\begin{itemize}
\item \textsuperscript{47} See, Vikramaditya S. Khanna, \textit{Corporate Crime Legislation: A Political Economy Analysis}, 82 WASH. U. L. Q. 95 (2004) (arguably the first and most important treatment of this complex relationship)
\item \textsuperscript{49} See, e.g., Department of Justice, Criminal Division, \textit{THE FRAUD SECTION’S FOREIGN CORRUPT PRACTICES ACT ENFORCEMENT PLAN AND GUIDANCE} 2 (2016) (“The Department is strengthening its coordination with foreign counterparts in the effort to hold corrupt individuals and companies accountable. Law enforcement around the globe has increasingly been working collaboratively to combat bribery schemes that cross national borders.”). See also, Brandon L. Garrett, \textit{Globalized Corporate Prosecutions}, 7 VA. L. REV. 1775 (2011)
\item \textsuperscript{51} C. Wayne Crews, Jr., \textit{TEN THOUSAND COMMANDMENTS: AN ANNUAL SNAPSHOT OF THE FEDERAL REGULATORY STATE} 2 (2016); for the official government report on federal regulatory costs, see: 2016 DRAFT REPORT TO CONGRESS ON THE BENEFITS AND COSTS OF FEDERAL REGULATIONS AND AGENCY COMPLIANCE WITH THE UNFUNDED MANDATES REFORM ACT (2016) (available at: https://www.whitehouse.gov/omb/inforeg_regpol_reports
federal regulation was its own economy, it would be the tenth largest in the world. And this excludes the regulatory administrative and policing costs that add an additional $59.5 billion.\footnote{Id at 16-18} For those who see regulatory compliance costs as another tax, the regulatory spending “tax” is greater than individual income and corporate income taxes combined.\footnote{Id at 12} Even assuming significant measurement error in these estimates, few dispute the enormity of the regulatory burden on businesses.\footnote{See, e.g., Dieter Helm, Regulatory Reform, Capture, and the Regulatory Burden, 22 OXFORD REVIEW OF ECONOMIC POLICY 169 (2006); U.S. Government Accountability Office, REGULATORY BURDEN: MEASUREMENT CHALLENGES AND CONCERNS RAISED BY SELECTED COMPANIES (2013)} With a steep linear increase in compliance and regulatory risk staffing, particularly in the financial industry, one may ask how much responsibility the private sector should assume for self-policing and self-regulation without good compliance science?\footnote{Corporate compliance staffing levels are at an historic high. For example, by 2015, JP Morgan had a compliance and regulatory staff of more than 43,000. See, PYMNTS, Regulations, Regulators and The High Cost of Banking Compliance, May 31, 2016 (available at: http://www.pymnts.com/news/security-and-risk/2016/banks-spend-and-hire-in-new-regulatory-environment/). For this same period, the number of JP Morgan’s compliance and regulatory staff exceeded the number of officers in the U.S. Custom’s and Boarder Protection, and was three times the number of agents in the Federal Bureau of Investigation.} Any answer to this question must attend to increasing concerns over individual liability for compliance and regulatory staff and, ultimately, the risks of an over-controlled compliance state in the private sector.\footnote{See Stacey English and Susanna Hammond, COSTS OF COMPLIANCE 2016 (2016) (available at: https://risk.thomsonreuters.com/content/dam/openweb/documents/pdf/ risk/report/cost-compliance-2016.pdf) (“What is certain is that greater personal liability will become reality in 2016 in many jurisdictions.”}

II. A Compliance Convergence

This is an admittedly harsh critique of corporate criminal regulation. It would be unfair as well and quite incomplete, but for some more favorable reflection on how the corporate compliance industry has grown in response to certain regulatory reforms, threats of more aggressive corporate prosecutions, the availability of technology-driven risk and compliance applications, and the impressive marketing efforts by a large “business
ethics” industry. For example, the dramatic rise of both FinTech and RegTech applications and solutions lead to speculation about a transformative, if not paradigmatic shift in technology-driven compliance, e.g., the digitalization of compliance. The vast disruptive potential of the next generation of these technologies, across a wide range of business and regulatory functions, is only now coming into focus. Advances in distributed ledger technology (e.g., DLT or blockchain) are producing some very promising hand-shaking experiments between and among banks with endless applications to domestic and international corporate regulation. This includes, at least in theory, an era of increasingly sophisticated regulator-based systems, successful co-regulated systems, and even a well-integrated supra-regulator systems.

Regulators are recognizing the need for new resources to oversee FinTech and RegTech technologies while, at the same time, considering how

60 DLT or Blockchain is distributed ledger technology that stores a tamper-proof, permanent ledger of transaction data. For a discussion of some creative applications, see Carlo R.W. de Meijer, Blockchain and the Securities Industry: Towards a New Ecosystem, 8 J. OF SECURITIES OPERATIONS & CUSTODY 322 (2016); Richard T. Ainsworth and Andrew Shact, Blockchain (Distributed Ledger Technology) Solves VAT Fraud, Unpublished Manuscript, June 20, 2016; Barclays, Cash Cows—How Blockchain is Transforming Trade Finance, November 1, 2016; Kim S. Nash, IBM Pushes Blockchain into the Supply Chain, WALL STREET JOURNAL, July 14, 2016; James Langton, Major Banks Complete Blockchain Test, INVESTMENT EXECUTIVE, January 21, 2016

61 Javier S. Cermeno, Blockchain in Financial Services: Regulatory Landscape and Future Challenges for its Commercial Application, BBVA WORKING PAPER (2016); Laurent Probst, Laurent Frideres, Benoît Cambier, Christian Martinez-Diaz, BLOCKCHAIN APPLICATIONS AND SERVICES (2016)
both might enhance their own examination, compliance, and enforcement capabilities. The redesign and integration of compliance technologies across a wide range of business processes are more than promising. Not known for hyperbole, the Securities and Exchange Commission (SEC) has publicly commented that “Fintech innovation has the potential to transform virtually every aspect of our nation’s financial markets.” Of course, all of the obvious regulatory challenges accompany rapidly evolving and disruptive technologies, e.g., regulatory inertia, lack of standardization, and limited network capacity.

At the same time of the Fintech and GenTech disruption, there is an increasing reliance on sophisticated governance, risk, and compliance (“GRC”) solutions by firms in many sectors and markets; big data across divisions, departments, and risk areas are only now beginning to be systemically aggregated, disaggregated, and mined; innovative open-source GRC models and metrics are now more commonly adopted and promoted across industries; and technology from both artificial intelligence

62 Michael del Castillo, Blockchain Won’t Just Change Regulation, it Could Reshape the SEC, COINDESK, November 15, 2016 (discussing how the SEC’s Distributed Ledger Technology Working Group (DLTWG) views the demands of blockchain on regulators and how this technology might contribute to regulatory capacity.) See also, Michael del Castillo, How the SEC’s Blockchain Lead is Defining Future Regulation, COINDESK, November 17, 2016.

63 This includes the creation of uniform compliance risk categories; better regulatory risk identification; standardized compliance risk taxonomy; automated monitoring of compliance standards; and monitoring change and application. See: Ernst and Young, INNOVATING WITH REGTECH: TURNING REGULATORY COMPLIANCE INTO A COMPETITIVE ADVANTAGE (2016) (available at: http://www.ey.com/Publication/vwLUAssets/EY-Innovating-with-RegTech/$FILE/EY-Innovating-with-RegTech.pdf)

64 Press Release, SEC to Hold Forum to Discuss Fintech Innovation in the Financial Services Industry, Securities and Exchange Commission, September 27, 2016. See also Cliff Moyee, How Blockchain Can Revolutionize Regulatory Compliance Technology Poised to Transform Business Processes, CORPORATE COMPLIANCE INSIGHTS, September 27, 2016 (Blockchain applications will reach “trade reporting; clearing, confirmation, validation and settlement; recordkeeping; monitoring and surveillance; risk management; audit; management and financial accounting; and regulatory compliance (including – but by no means limited to – financial crime prevention.”))

and the cognitive sciences are beginning to shape and re-shape GRC modeling.\footnote{Estimates regarding the size and growth of the GRC market vary widely. Industry forecasts, however, remain very positive. See, e.g., The GRC Market is Expanding at an Exponential Rate, June 29, 2015 (available at: https://www.lockpath.com/blog/the-grc-market-is-expanding-at-an-exponential-rate/) (“With over 600 GRC solutions on the market currently, it seems that predictions show that the GRC market would hit $31.77 billion by the year 2020 with global compliance market spend reaching $2.6 billion in 2015 alone”); John Verver, Big Data and GRC, CORPORATE COMPLIANCE INSIGHTS, June 21, 2013. For a wise critique of the GRC movement, one that promotes a more active role for regulators in crafting the GRC model, see Kenneth A. Bamberger, Technologies of Compliance: Risk and Regulation in a Digital Age, 88 TEX. L. REV. 669, 677 (2009). Next generation GRC models focus on increasingly open frameworks, more fluid implementation, and systems integration of additional stakeholders. See, Michael Volkov, THE IMPACT OF NEW TECHNOLOGIES IN CORPORATE GOVERNANCE, RISK MANAGEMENT AND COMPLIANCE PROGRAMS (2013) See infra notes to}

It is a fair prediction that some iteration of GRC thinking today will lead to the integration of firm, industry, and regulatory standards tomorrow.\footnote{See infra notes to} The emergence of more sophisticated machine learning approaches and Cognitive GRC models hold particular promise as an enterprise, cross-functional platform for real-time monitoring of regulatory changes, minimizing operational risks, and managing risks from both vendors and multiple tier supply-chain partners.\footnote{See e.g., C. L. Dunis, P. W. Middleton, A. Karathanasopolous, & K. A. Theofilatos (eds.) ARTIFICIAL INTELLIGENCE IN FINANCIAL MARKETS: CUTTING EDGE APPLICATIONS FOR RISK MANAGEMENT, PORTFOLIO OPTIMIZATION AND ECONOMICS (2017); Heiko Thimm, ICT Support of Environmental Compliance—Approaches and Future Perspectives, in V. Wohlgemuth, F. Fuchs-Kittowski, and J. Wittmann (eds.) ADVANCES AND NEW TRENDS IN ENVIRONMENTAL INFORMATICS (2017); Carole Switzer, Accelerating the Evolution of GRC, COMPLIANCE WEEK 74 (2016) (exploring the transformative power of cognitive GRC). Cf. S. Lyons, Corporate Defense: Are Stakeholders Interests Adequately Defended? 1 J. OF OPERATIONAL RISK 67 (2006)} Combining institutional frameworks with agent-based simulations (institutional agent-based models) and pairing AI robots with key compliance professionals offer a window into the complex dynamics of regulation that was unimaginable until only recently.\footnote{See, e.g., Tina Balke, Marina De Vos, and Julian Padget, I-ABM: Combining Institutional Frameworks and Agent Based Modelling for the Design of Enforcement Policies, 21 ARTIFICIAL. INTELL. L. 371 (2013); Samson Esayas and Tobias Mahler, Modeling Compliance Risk: A Structured Approach, 23 ARTIFICIAL. INTELL. L. 271 (2015); see also Anant Kale, Artificial Intelligence: The New Super Power for Compliance, CORPORATE COMPLIANCE INSIGHTS, August 31, 2016.} An increasing commitment to leading-edge compliance data analytics permit large financial institutions and hedge funds of all sizes surveillance and monitoring solutions that were science fiction until only recently. Augmented and virtual reality extensions to compliance offerings also offer new ways of
delivering risk management practices, and new revenue streams for accountancies, consultancies, and law firms.\textsuperscript{70}

Contemporaneous with FinTech, RegTech, the dramatic rise in the use of compliance data analytics, and advances in GRC is a recognition that social science research on compliance may offer value in developing effective corporate crime policy.\textsuperscript{71} While evidence-based research on corporate criminal regulation is still exceedingly difficult to find, there is an impressive stream of scholarship by psychologists, sociologists, and criminologists on the many motives that encourage or discourage compliance inside and outside of complex organizations.\textsuperscript{72} In spite of long-standing and near insurmountable challenges with access to good white collar and corporate crime data, there is also an emerging literature on the internal and external characteristics of firms that are most associated with law abidance.\textsuperscript{73}

\textsuperscript{71} Cf. Parker and Nielsen, \textit{supra} note . These authors seriously question the application of compliance research. They write that: “There is considerable disagreement as to whether a wide range of corporations would ever have the motivation and capacity to implement effective compliance systems and whether such systems could be effective even if corporations were willing and able to implement them.” \textit{Id} at 189.

\textsuperscript{73} For an excellent discussion of the difficulties of securing white collar crime research data, \textit{see}: Sally S. Simpson and Peter Cleary Yeager, \textit{BUILDING A COMPREHENSIVE WHITE-COLLAR VIOLATIONS DATA SYSTEM} (2015); Marshall Clinard and Peter Yeager, \textit{CORPORATE CRIME} 97 (1980) (discussing data limitations). The literature on organizational capabilities and characteristics assembled by Parker and Nielsen, \textit{supra} note , reflects the diversity of scholarship. It is worth highlighting Parker and Gilad contribution on structure, culture and agency. This is perhaps the best writing on the complex prospects of regulator-mandated compliance systems. \textit{See also}, Lori S. Bennear, \textit{Are Management-Based Regulations Effective? Evidence from State Pollution Prevention Programs}, 26 JOURNAL OF POLICY ANALYSIS AND MANAGEMENT 327 (2007); Gary R. Weaver, Gary and Linda Klebe Treviño, \textit{Compliance and Values Oriented Ethics Programs: Influences on Employees’ Attitudes and Behavior}, 9 BUS. ETHICS Q. 315 (1999). Researchers are increasingly looking at changes in actual behavior of agents following the initiation of, or changes in, an integrity initiative, \textit{see}
A separate but related body of work, even more developed, explores organizational responses to innovations in regulation.\textsuperscript{74} Some of the better quantitative research on environmental compliance, for example, is framed around a groundswell of new governance and new regulatory models that push plural and decentered concepts.\textsuperscript{75} From systems-based regulation and principled-based regulation to smart regulation, meta-regulation, and regulatory excellence (RegX), the important role of third parties and non-state actors have helped reconceive thinking about conventional regulator-regulated relationships.\textsuperscript{76}

When you add together recently introduced international enterprise-wide governance, risk, and compliance standards to this mix, such as those from the International Organization for Standardization (e.g., ISO19600, ISO31000, and ISO38500), and the Enterprise Risk Management standards from the Committee of Sponsoring Organizations of the Treadway Commission (COSO ERM), there is an impressive convergence. There is, quite simply, a gestalt of models, measures, metrics, data, analytics, standards, committed compliance professionals, relevant compliance scholarship, and vast firm resources dedicated to promote compliance and good governance while minimizing enterprise risk and liability.\textsuperscript{77} This is an

\textsuperscript{74}For a general treatment, see: Christine Parker, THE OPEN CORPORATION: EFFECTIVE SELF-REGULATION AND DEMOCRACY (2002). \textsuperscript{76}For an excellent collection of some of the best research on regulatory policy making, enforcement, responses to regulation, and next generation thinking about regulation, see: Cary Coglianese and Robert A. Kagan (ed.), REGULATION AND REGULATORY PROCESSES (2007). For recent extension of Cary Coglianese’s work, see LISTENING, LEARNING, LEADING: A FRAMEWORK FOR REGULATORY EXCELLENCE (2015); Cary Coglianese (ed.) ACHIEVING REGULATORY EXCELLENCE (2017) (a series of outstanding contributions to the conception, applications, and limitations of regulatory excellence)

opportunistic convergence of formal and informal social controls across the entire firm—from corporate strategy, organizational processes, and available technology to culture, leadership, and people. It is, in some ways, a challenge for a new, transformative promise of the scientific state. If there is any progress made accessing a vast array of white collar crime and organizational crime data from federal and state agencies, this also may be a critical turning point in the scientific study of corporate crime.78

How architects of the corporate criminal law should embrace this convergence in ways that recognize the importance of private and public sector social control is a central challenge to the development of a progressive account.79 This challenge would be “insurmountable” if conceived narrowly as a task for the state to assume the role of the new age experimentalists and decipher which specific variables, proxies, or metrics are part of a general prescription that should be offered to the private sector as effective compliance or organizational due diligence.80 Instead, the burden must be shared across all compliance stakeholders to meet the challenges of this compliance convergence with a far more developed capacity that addresses regulatory needs, capabilities, and requirements. This is actually a co-regulatory challenge that will inevitably require different exchanges, revised instruments and analytics, and increasingly lower costs through the cross-

78 Simpson and Yeager, supra note at 3 (“Despite its voluminous collections of data on conventional crimes and the legal responses to them, the Nation has long lacked systematic data on white-collar offenses and the sanctions employed against them.”); see also, Marshall Clinard and Peter Yeager, Corporate Crime: Issues in Research, 16 CRIMINOLOGY 255 (1978) (reviewing the dearth of corporate crime research)

79 As Daniel Richman astutely noted in his brief response to Brandon Garrett’s work on structural reforms, “I suppose that in theory, one could envision the Justice Department presiding over a lovely experimentalist regime in which the “informal exchange of information amongst independent monitors, prosecutors, regulators, and industry experts will, over time, create a narrow set of accepted best remedial practices.” Figuring out what “works”—that is, how to measure compliance—is not just a technical challenge here, however. It is a fundamental confounding problem in the whole area of white collar enforcement.” Daniel Richman, Institutional Competence and Organizational Prosecutions, 93 VA. L. REV. IN BRIEF 115 (2007).

80 Daniel Richman, Institutional Competence and Organizational Prosecutions, 93 VA. L. REV. In Brief 115 (2007) (“Finding appropriate performance metrics is hard enough for those engaged in (or opposing) structural reform in prisons, schools, or other such institutions. In the white collar area, the challenge may be insurmountable.”) Cf. Laufer supra note 28
enterprise integration of regulatory technology. It is also a challenge that will benefit from the lessons learned in maturing other regulatory settings, such as the many successful self-regulatory organizations (e.g., Financial Industry Regulatory Authority (FINRA); Municipal Securities Rulemaking Board (MSRB), and American Arbitration Association (AAA)), along with sector-specific co-regulation of environmental protection, health and product safety, and climate protection.81 Finally, much can be learned from the many noteworthy co-regulatory successes in combating cybercrime, and ensuring cybersecurity and national security.82

This convergence in compliance thinking, standards, analytics, and metrics is certainly not provincial. The development and sharing of increasingly sophisticated and elaborate compliance models across Europe and Australia, for example, suggest that there is an emerging convention in regulatory technology and models in jurisdictions with and without the same threats from command and control approaches to entity liability.83 Many of our old concerns still define foreign civil, administrative, and criminal regulation of corporates, including “paper compliance” programs, piecemeal and unpredictable changes to government guidance that tease the regulated with incentives and disincentives, and an absence of contemporaneous decisional and statutory laws to provide and interpret clearly-stated principles.84 Notably, many of the most significant concerns with advancing

81 See, e.g., Bertelsmann Stiftung, FOSTERING CORPORATE RESPONSIBILITY THROUGH SELF- AND CO-REGULATION (2013); Cameron Holley, Neil Gunningham, and Clifford Shearing, THE NEW ENVIRONMENTAL GOVERNANCE (2013). What little is known about exchange-based conceptions of compliance will help as well. See Weaver and Trevino, supra note . See also, Gary R. Weaver, Ethics Programs in Global Businesses: Culture’s Role in Managing Ethics, 30 JOURNAL OF BUSINESS ETHICS 3 (2001); Laufer, supra note
82 See, e.g., Tatiana Tropina and Cormac Callanan, SELF- AND CO-REGULATION IN CYBERCRIME, CYBERSECURITY AND NATIONAL SECURITY (2015)
financial and regulatory technology were raised first by regulatory bodies and non-governmental organizations outside the United States.85

In countries with a less developed rule of law, there are also lessons to be learned from successful public, private, and non-state regulation and enforcement.86 The challenges of bringing leading compliance solutions to companies and government agencies at different strata in the economic pyramid are discussed. Seldom do we think about how governance, risk, and compliance solutions might apply, for example, to municipalities or state owned enterprises in developing countries. The fair melding of private and public interests in a diverse set of enterprises across cultures would be of great interest to progressives, so long as the outcome is more corporate criminal justice.

III. Why a Progressive Account?

In some ways, not much has changed from the time of the progressive party platform of 1912.87 Concerns over concentrated wealth are well over a hundred years old. Monopolies were said to be fueled by inordinate greed, unbridled corporate power, and seemingly limitless growth.88 Like today, progressives a century ago were concerned with the functioning and fairness of institutions of corporate social control, and how much regulatory discretion is left to the boundless imagination of the private sector. Modern progressives also recognize the ascendant power and place of corporations, and the limitations of the market to produce fair and just outcomes. Like their ideological predecessors, they seek some semblance of responsibility, some accountability, and some long overdue legal reforms.89 In playing off the

86 H. Weeke, S. Parker, and E. Malesky, *The Dynamics of Vietnam’s Business Environment: Complying with Obligations Abroad and Competing at Home*, 12 DEVELOPING ALTERNATIVES 1 (2009); A. A. King, and M. J. Lenox, *Industry Self-Regulation without Sanctions: The Chemical Industry's Responsible Care Program*, 43 ACAD. OF MANAGEMENT J., 698 (2000). One of the most important lessons, for example, is that cooperation between regulators and the regulated in the design of instruments significantly improves law abidance.

88 These concerns were long-lasting. See, Ellis Wayne Hawley, *THE NEW DEAL AND THE PROBLEM OF MONOPOLY* (2015).

89 Recent efforts to infuse the 2016 Democratic Party Platform with progressive ideology turn on improved corporate citizenship, enhanced shareholder activism, increased executive
Wall Street/Main Street dichotomy today, progressives’ remain exercised by concentrated wealth extremes, unfair business tax provisions, and a wide range of unattended to social, environmental, economic, and racial injustices.\textsuperscript{90} They want to undermine corporate hegemony, break the corporate stranglehold on Capitol Hill, and abolish the idea of corporate personhood. Progressive also want more corporate wrongdoers debarred from government contracts; limited from exploiting offshore tax loopholes; subjected to expanded transparency and disclosure requirements about environmental, human rights, and worker safety records; and forced to reign in executive compensation.\textsuperscript{91}

A modest outline of progressive corporate criminal law is offered below as a catalyst to combat the regulatory status quo and, far less ambitious, to build capacity into the modern progressive account. This outline is a blend of old progressive principles, set in today’s compliance environment, with an appreciation of the concerns of modern progressives. Part of the inspiration for a progressive account comes from the failure of the state to recognize the convergence of new enterprise-wide standards, metrics, analytics, new regulatory models, and asymmetric private sector investment in compliance products and services. Inspiration for this account also may be traced to how the moral reprehensibility of corporate crime is so often washed clean, and profound concerns with the ways in which corporate criminal justice system is successfully gamed.\textsuperscript{92} It may be washed and gamed, at least in part, because of the absence of any systematic recognition of corporate victims and victimization. As suggested earlier, it is as remarkable as it is disturbing that there is no field of corporate victimology.

\textsuperscript{92} See, William S. Laufer, \textit{Social Accounting and Corporate Greenwashing}, 43 J. OF BUS. ETHICS 253 (2003) (discussing ways in which reputations of firms are laundered)
A. PROGRESSIVE THINKING

The recent history of the progressive movement defies simple description. Indeed, it is difficult to assemble the diverse political and social factions of modern progressivism. Those who claim to represent the progressive vision, issues, beliefs, and values of today often capture only a share of the significant variance in prevailing theory and dogma. At times, progressive accounts of law also fail to neatly converge. That said, progressive ideology coalesces around issues of social justice, environmental sustainability, fair wages, and equitable workplace regulations. Even more prominent, and relevant here, are concerns with the concentration of wealth and power in the hands of a corporate oligarchy. Progressives are united behind the idea that our democracy and democratic institutions are compromised by elites and powerful interest groups who think and act in ways that are disconnected from the reality of non-elites.

In recent years the ideology of progressivism, like liberalism and socialism, also became a regular target of dismissive political barbs. The modern welfare state may be the greatest achievement of the progressive movement, but subscribing to welfare-state politics does, indeed, embolden

---

93 See, e.g., Yonathan Amselem, The Formlessness of Progressivism, Miles, December 30, 2015 (available at https://mises.org/library/formlessness-progressivism) (“Progressives are often good people with good intentions. However, modern Progressivism has evolved into something so shapeless and amorphous as to amount to little more than a belief in “things that sound nice.”); see also Glastris supra note at (“As many observers have noted, there are arresting parallels between our age and the 1890s, the dawn of the Progressive Era.”)

94 It is much easier to distinguish old and modern progressives, and modern and post-modern progressives. For a right of center critique of the latter, see, Kim R. Holmes, THE LOSING OF THE LIBERAL MIND (2016)

95 See, e.g., Al Yates and Anne Bartley, A SYNTHESIS OF AMERICAN PROGRESSIVE VALUES, BELIEFS, AND POSITIONS (2012); Elizabeth Sanders, Rediscovering the Progressive Era, 72 OHIO ST. LJ 1281 (2011)

97 Bernie Sanders, Democracy or Oligarchy, THE PROGRESSIVE, August 7, 2014 (available at: http://www.progressive.org/news/2014/08/187809/democracy-or-oligarchy) (“The major issue of our time is whether the United States of America retains its democratic foundation or whether we devolve into an oligarchic form of society where a handful of billionaires have almost absolute control over the political and economic life of the nation.”)

foes and exact costs.99 Some progressives, we are told, employ a thinly veiled guise for promoting a radical and, arguably, unjustifiable expansion of the role of government in our lives. In other cases, there is no veil, as with the stated desire to break up the big banks, along with the free-thinking demonization of Wall Street and its resident institutions. Other progressives are said to be “boutique liberals” who depart from the shared understanding of our Founders about the text of the constitution, and are committed to communitarianism, or something worse.100 Progressives are cast, fairly or not, as an unruly band of politically left ideologues. We have clearly come a long way from Rousseau and Hegel, Wilson and Roosevelt.101

The kind of progressive corporate criminal law presented below is not a fair reflection of these positions or a reasonable target of this critique. The boundaries around this body of law are inspired by the brand of progressivism and institutionalism that marked a distinct shift from laissez-faire policies to a very limited and directed government engagement in the early 1900s.102 In 1904, it was Thorstein Veblen’s call for new thinking about institutional economics that coalesced academic writing about the changing nature of the business firm, its growth, scale, and power.103 Soon thereafter, J. M. Clark extended turn-of-the-century social control theory to the business firm, offering a path for new institutions to complement the power and suasion of the market—new institutions that would guide the social direction of a maturing administrative state.104 Progressives and institutionalists, economists and sociologists, stepped in where “existing legal and social institutions…were outmoded and inadequate to the task of the social control of modern large-scale industry.”105 This disconnect between functioning institutions of social control and corporations of scale and power should be the hard target of modern-day progressives. Disparate groups and factions in the larger progressive collective should target the emasculation and gaming of the corporate criminal law in regulatory practice.

99 See, e.g., Hovenkamp supra note
100 See, e.g., Hovenkamp supra note
101 Id
The ingredients of twentieth century theories of institutional economics are largely pragmatic and policy-driven, with strong commitments to controlling the growth of big business and curbing corruption. At the same time, both movements share important theoretical foundations. Institutions are not only central to the ordering of an economy, but dynamic, changing, and in need of appropriately gauged social controls that benefit from scientific and, in particular, experimental scrutiny. The institutionalist creed, according to historians, is to construct institutions and related policies responsive to the challenges of social control. And this response must come from more than simple anecdotes, naïve theorizing, or political expediency. For institutionalists, a positivist account requires that science mold and meld with the very institutional arrangements that orders and governs markets. The legacy of Ross’s social realism and Taylor’s call for science management have found a new life.

The brand of progressivism promoted here takes the shape of a positivist account that looks to replace intuitions and politically-driven ideologies in crafting enterprise compliance and governance prescriptions with measured and just government and corporate controls. To achieve this ideal, progressives look to the formality of social controls (along a continuum from informal to formal); the level of controls (across agent, firm, industry, and public sector levels); the responsibility for social controls (exploring the

---

108 For a detailed and careful history of the emergence of social science in the progressive period, see Dorothy Ross, THE ORIGINS OF AMERICAN SOCIAL SCIENCE (1991)
109 As Leonard supra note at 66 observed: “Progressives enthusiastically and rapidly seized on industrial efficiency as an exemplar, imagining that scientific management could increase efficiency not just on the shop floors of factories but in all corners of an industrial society plagued by waste, conflict and injustice.”
110 See, S. Weinberg supra note at 68; Sigmund Wagner-Tsukamoto, An Institutional Economic Reconstruction of Scientific Management: On the Lost Theoretical Logic of Taylorism, 32 ACADEMY OF MANAGEMENT REVIEW 105 (2007) (“This paper points toward a high contemporary relevance of scientific management—and of institutional economics. They can well advise us on organizational problems, especially in “modern” interaction contexts that are defined by diversity and pluralism.”)
111 For a lengthy discussion of progressivism in relation to both corporation and government control, see Benjamin P. DeWitt, THE PROGRESSIVE MOVEMENT: A NON-PARTISAN COMPREHENSIVE DISCUSSION OF CURRENT TENDENCIES IN AMERICAN POLITICS 113-161 (1915)
increasing privatization of regulation); and the locus of control (recognizing how social controls differ in effect in private, state-owned, government entities). To make the construction of this century-old bridge a bit more realistic, this brand of progressivism should recognize the generally narrow motivations of the private sector to fend off anything but informal social controls, and the limited capacity of government functionaries to assume responsibility and for defining, crafting, and escalating these controls.

The history and heritage of this positive account lead to some zealously guarded positions. For example, neoconservatives make much of the regulatory burden as an unjustifiable incursion on the private sector. Modern progressives would likewise bemoan current spending levels on defensive corporate self-regulation or preventive law, but do so because there is simply so little evidence that current compliance expenditures make firms and their agents more compliant. Expenditures may protect the entity from liability but that is, of course, quite different. Corporate Libertarians would dismantle and abolish entity liability if permitted. Modern progressives would likely see corporate wrongdoing as reducible to individual fault. At the same time, though, they should concede that organizational fault is a fair proxy for some corporate wrongdoing, in some cases, and look to how an enterprise-wide regulatory architecture might house the ingredients of fair and just corporate social controls.

Recent moves constraining the discretion of federal prosecutors to individual rather than entity liability, modern progressives might add, risk greater undistributed justice where evidence of individual agent culpability is lacking or is difficult if not impossible to secure. Moreover, shifts in formal policies about discretionary determinations of fault should be accompanied by more thoughtful and measured compliance standards that accommodate regulatory policy changes and embrace new technology.

Politicians and criminal justice functionaries pontificate about the need for corporate entities to adhere to prescriptive compliance and governance routines. Modern progressives would say, though, that regulators are long on moral rhetoric and short on due diligence expectations grounded in planning, process, and outcome factors that are measurable, e.g., using

---

112 See William S. Laufer and Diana C. Robertson, Corporate Ethics Initiatives as Social Control, 16 JOURNAL OF BUSINESS ETHICS 1029 (1997)

114 For the historical debate between and among progressives on entity liability, see Hager, supra note
combinations of management-based, performance-based, or technology-based measures and metrics.\footnote{115}{For a brief discussion of collaborative associations between government and business in progressive history, see: McGerr supra note at 315. Alternatively, as noted later, co-regulatory or collaborative systems should be proposed. Specific diligence expectations are “owed” regulated firms because certain legislative reforms and discretionary guidelines simply require companies to have such programs, policies, and practices. Further, prosecutors and regulators push incentives that drive firm compliance expenditures and investment, often without restraint, and rarely with any comparable government expenditures that builds regulatory capacity.}

Modern progressives should marvel at the stalemate between the government’s failure to embrace evidence of compliance effectiveness as “due diligence,” and the private sector’s reluctance to make those kind of compliance investments that will inevitably result in the need to “voluntarily” disclose non-compliance. Finally, modern progressives should spend significant political capital looking for ways to level the regulatory playing field for small firms and their more powerful counterparts.\footnote{116}{Herbert Hovenkamp, The Mind and Heart of Progressive Legal Thought, 81 IOWA L. REV 149, 153 (1995) (“Progressives did though coalesce around the idea that the market was squarely to blame for noncompetitive business practices and an unfair transfer of wealth toward the rich. The focus centers around the limitations of the market and its remedy, the administrative state, and a playing field for big and small firms that lacked fairness and rules.”)} That there are multiple tracks of adjudication associated with firm size requires more than a passing reference to collateral consequences or systemic risks.\footnote{117}{See Laufer supra note 43 (discussing the compliance game)}

Perhaps most important, progressivism recognizes the “transformative promise of the scientific state” so that government will be both an instrument and object of reform. Unfortunately, one is hard-pressed to find a constituency with the motivation and capacity for this transformative process. Inside the modern progressive community, voices of discontent about corporate fault are seldom raised and rarely heard. Of course, Wall Street abuses are an integral part of the progressive rallying cry. But with the stated desire to abolish corporate personhood, little to nothing is said about why liability rules and standards of culpability are not fashioned around corporate persons, around the enterprise as an enterprise. Even less is said about how the construct of corporate compliance is so narrowly conceived, and related expenditures are too often seen as a good or best available proxy for compliance.

The fact that conceptions of entity liability today are moved to the margins with little fanfare and with so few objections is easily explained. Elsewhere, I argue that corporate criminal liability is a failure not because of confusing metaphysics; not because evidence of criminal wrongdoing is so well-guarded that is difficult to obtain; and not because of the obvious externalities of this blunt instrument of social control. The present regime of corporate criminal liability fails because there is no bounded constituency backing a general and specific part of corporate criminal law willing to address the inauthenticity of both the regulated and regulators as they play a game over compliance and compliance expenditures.

Modern progressives, as a constituency, need not take on that role. But it is one that progressives may rightly and quite effectively assume. It would take a strong embrace of the remarkable convergence in compliance thinking, advancing technology, emerging methods, and consensus building standards. This is a strategic embrace to bring about a commensurate engagement by prosecutors and regulators. It would take a reluctant acceptance of corporate personhood for the purposes of facilitating attributions of criminal liability not only to blameworthy individuals, but to entities as well.

Modern progressives would have to muster enough moral indignation over corporate crime, enough outrage to make the case that corporate persons,
large and small, also deserve their fair share of accountability.124 There would have to be a call for a reallocation of criminal justice expenditures to ensure that the administration of justice is fairly and justly distributed to all persons, human and corporate. And the victims of organizational wrongdoing must be recognized by a more formal corporate victimology. Alas, this is not too tall an order for a movement once wholly committed to scientism in the name of measured informal and formal social controls.125

B. MORAL INDIGNATION AND DESERT

The ideological core of a corporate criminal law progressivism reflects a more formal orientation, one that sits comfortably with new governance theories and to the political left of other theories of criminal justice that unabashedly promote comprehensive consequentialist ends. This includes, for example, the Republican Idea of Justice, brilliantly fashioned with well-dressed utilitarian desiderata.126 Unlike some rival neoclassical approaches and models, progressive corporate criminal law champions a brand of economic arrangements and regulatory practices that are “ethically defensible.”127 The ultimate question for twentieth century progressives, according to Professor Clark, was a moral one.128 At minimum, economic activity should be consistent and not at odds with the public interest. The invisible hand, according to older progressives, becomes noticeably visible with corporates of significant scale and power.129

The limited and oddly shaped conception of orthodox economics was the target of progressives nearly a century ago. It remains so today. An economics of irresponsibility is a simple product of the primacy of excessive

---

124 One might say that modern progressives need to be driven by “a fierce discontent.” See, Michael McGerr, A FIERCE DISCONTENT: THE RISE AND FALL OF THE PROGRESSIVE MOVEMENT IN AMERICA (2003) (quoting Theodore Roosevelt “So far as this movement of agitation throughout the country takes the form of a fierce discontent with evil, of a firm determination to punish the authors of evil, whether in industry or politics, the feeling is to be heartily welcomed as a sign of healthy life.”). For a discussion of how indignation might fuel changes in law, see Jack Katz, The Social Movement Against White-Collar Crime, in E. Bittner & S. L. Messinger, CRIMINOLOGY REVIEW YEARBOOK 161 (1980)
125 Given the antecedents of racism in the history of progressive thought and dogma, one might be snide and say that this is their destiny. See Hovenkamp supra note
126 See, e.g., John Braithwaite and Phillip Pettit, NOT JUST DESERTS: A REPUBLICAN THEORY OF CRIMINAL JUSTICE (1992)
128 Clark, supra note at 72
129 As Rutherford notes, early theorists were concerned with corporate abuses of the day. See, Malcolm Rutherford, Institutional Economics: Then and Now, 15 J. ECON. PERSPECTIVES 173, 175 (2001)
“individualism,” “private interest,” and a commitment to “laisse-faire.” Criminal violations by businesses compromise this public interest and breach this trust. This breach by both organizations and individuals reflects an actionable immorality. Corporate wrongdoing engenders the kind of collective repugnance associated with offenders who have moral agency. Corporate criminals are deserving of blame and any wrongdoer left behind represents undistributed justice, part of an unpaid debt to society. Modern progressives look to the promise of deterrence in responsive regulation, supporting the suasion of informal social controls. This progressive reincarnation, however, comes from a desert-based deontological world, where fault ultimately determines liability and a punishment proportional to wrongdoing ensures that justice is done.

The genius behind neo-conservative accounts of corporate liability is the promise of justice without resort to the force of a “criminal” justice. Administrative and civil regulatory regimes, it is argued, will do justice. We are told that the direct and collateral consequences of corporate criminal liability are injustices to a wide range of innocents, from shareholders and debtholders to employees. Beyond the failed metaphysics of a corporate criminal law, this is an antiquated formal social control with nearly impossible to measure externalities. Those promoting the use of corporate criminal law are simply corporate bashing.

---

131 See Leonard, supra note
134 Laufer and Strudler, supra note 29
135 See, Kip Schlegel, JUST DESERTS FOR CORPORATE CRIMINALS (1990)
magnanimous concession to corporatism.\textsuperscript{137} It is also a disturbing mismeasure of moral indignation for corporate wrongdoing.\textsuperscript{138}

Criminal justice functionaries use condemnatory rhetoric about corporate malfeasance offering compelling but inauthentic outrage on behalf of the state.\textsuperscript{139} And beneath the dismissive and patronizing arrogance about justice done is a clearly conceived deference to big business, markets, risk-taking, entrepreneurship, and unbridled capitalism.\textsuperscript{140} After all, even the most serious corporate offenders are condemned by muted plea agreements that do little more than impose additional compliance costs. Corporations spend more and more compliance dollars, and are “monitored” until called to arms, once again, as the steady and obedient servants of economic growth.

As progressives know all too well, outrage, fear, anger, and genuine indignation abound for street criminals.\textsuperscript{141} “Bad guys” are seen as the justifiable targets of aggressive and concentrated law enforcement and, once processed, mass punishment.\textsuperscript{142} Our race- and class-based images of who are “bad” are as obvious as they are indelible.\textsuperscript{143} When we think of innovative law enforcement strategies, for example, our minds turn to “hot spots” and place-based policing in disenfranchised poor neighborhoods; aggressive stop and frisk policies that target people of color; and the increasing militarization of municipal police resources.\textsuperscript{144} Who first thinks of innovations in state-of-the-art forensic accounting methods; the intricate mining of employee, customer, and client large data; new algorithms and data analytics that

\textsuperscript{137} See Ralph Nader, \textit{Getting Steamed to Overcome Corporatism: Build It Together to Win} (2011)

\textsuperscript{138} See, Laufer \textit{supra} note 131 at

\textsuperscript{139} \textit{Id} at 24 (“Functionaries use moral rhetoric to convey a definite outrage at the temerity of such privileged wrongdoing. The message that justice must be done is conveyed with a pretense and sense of righteousness that mimics the emotions felt over an immoral act.”)

\textsuperscript{140} \textit{Id} at 25

\textsuperscript{142} Laufer, \textit{supra} note

\textsuperscript{143} Research on the salience of race as a heuristic for determining the blameworthiness of the defendant and the perniciousness of the crime is as telling and remarkable, as it is shocking. See, e.g., J. L. Eberhardt, P.G. Davies, V. J. Purdie-Vaughns, and S. L. Johnson, \textit{Looking Deathworthy: Perceived Stereotypicality of Black Defendants Predicts Capital-Sentencing Outcomes}, 17 \textit{Psych. Sci} 388 (2006); Darryl K. Brown, \textit{supra} note

deconstruct patterns of possible wrongdoing; and, more generally, the ingredients of successful experiments in private regulation?

When we think about how the debt owed to society from street crime may be repaid, we accept the idea of incarceration with reflection. We unabashedly use mass incarceration, ignoring the simple function of race, ethnicity, gender, age and education. Who thinks of innovations in the design, content, and implementation of “corporate punishment”? It should not be so trite to say that corporate punishment must resemble a true message of moral condemnation, rather than an itemized cost, optimal penalty, or additional revenue stream for a league of corporate gatekeepers.

Modern progressives should ask why corporate wrongdoing does not engender the kind of moral outrage and indignation that would support a fair regime of corporate criminal justice when lay perceptions of corporate crime seriousness rival serious street crime. In the absence of affective outrage, anger, disapproval, and indignation, government functionaries successfully placate stakeholders with scripted retributive text, and yet leave in place the risk-taking, innovation, and entrepreneurship associated with moving the economy forward. All along, firms are positioned in equally inauthentic ways, placating and pandering to regulators with an apparent moral outrage over an agent’s “rogue behavior.” In both cases, this is fairly called “fauX” indignation, and it should boil the blood of modern progressives.

Without hesitation, modern progressives must look elsewhere for justice. They may find moral fault in organizational wrongdoing and justify their left-leaning rhetoric as a matter of desert. Liability rules that focus exclusively on vicarious liability disregard blameworthy features of the

150 See, William S. Laufer, Corporate Inauthenticity and the Finding of Fault, In F. Centronze & M. Mantovani (eds.) LA RESPONSABILITA PENALE DELGLI ENTI 23 (2016) (“What makes this indignation faux? The text is calculated and crafted in ways that reveal an inauthenticity. The moral emotions and affect that capture indignation are missing. The anger and fear that combine in a very real way with street crime are simply not there. Faux indignation is, plain and simple, a convenient moral placeholder. And holding a place for moral indignation, as we shall see, is indispensable for regulatory equilibrium.”)
corporate form and those characteristics and attributes that should, in certain cases, absolve the entity from liability. Overlooking evidence of corporate intentionality also risks a compromise of desert principles.151 And modern progressives should worry that far too much justice is already undistributed with a regulatory status quo that is comfortably, efficiently, and deftly gamed by captured and uncaptured stakeholders.

C. THE COMPLIANCE GAME

Game theoretic models of compliance practices inspire some thinking about how firms and government functionaries strategically position themselves. Researchers, for example, have used game theory to explore the endogeneity of honesty in tax compliance, i.e., those factors that explain why taxpayers pay in full. Perceptions about the fairness of the tax code and whether others taxpayers are somehow better able to "play the system" are explanatory. Taxpayer reactions to government activities, policies, and personnel are also important.152

Others look at the tax compliance game by exploring the relative decision making strategies of all tax stakeholders, e.g., taxpayers, elected government officials, appointed tax authorities, and tax accountants. These strategies are grounded in a wide range of economic and psychological factors. Tax payments depend, in part, on policies being seen as legitimate; free riders must be eliminated; and the non-cooperative must be brought back into the fold with threats of command and control regulation.153 Finally, there is a significant potential for firms to free-ride in intra-industry collective action settings, i.e., individual firms may benefit from the compliance of others without regard to their own behavior. The result of this problem may be an obstacle to successful self-regulation. Game theory research reveals that overcoming free-riding problems turns on compliance motives as well as other strategic interactions.154

As mentioned earlier in this Article, there is a very active regulatory game played around corporate criminal compliance. To appreciate the

151 See Laufer and Strudler, supra note 29 (arguing for the place of corporate intentionality in a conception of corporate deservedness)
153 James Alm, Erich Kirchler, and Stephan Muehlbacher, Combining Psychology and Economics in the Analysis of Compliance: From Enforcement to Cooperation, 42 ECONOMIC ANALYSIS AND POLICY 133, 134 (2012) (“It is thus necessary to apply strategies based on both economic and psychological arguments to promote mutual trust and cooperation.”)
premise of the game, though, it is necessary to go back in time. In the immediate aftermath of the passage of the Sentencing Guidelines for Organizations in 1991, a cottage industry of business ethicists, consultancies, accountancies, along with a significant number of white collar defense lawyers, coalesced around the marketing of corporate compliance programs and services.\(^{155}\) The market was pitched with a coordinated campaign to ensure that companies were “in compliance” with the Guidelines.\(^{156}\) By 1994, the boundaries of the field of corporate compliance were already set.\(^{157}\) From state-of-the-art compliance training techniques, and checklists for effective compliance programs, to compliance program methodology and a nascent compliance science, an industry was born that catered to every conceivable private regulatory need.\(^{158}\)

Remarkably, “custom” and even “proprietary” compliance products, programs, and solutions bought and sold until very recently were virtually indistinguishable as commodities.\(^{159}\) This commodification of compliance, coupled with the failure of regulators to develop any significant capacity to evaluate compliance programs and practices, supported a complex brew of incentives and disincentives that supports a multi-stakeholder compliance game.\(^{160}\) The ultimate objective of this game, however, is not economic corporate criminal justice. The incentives and disincentives are not designed to change corporate behavior, improve corporate culture, and facilitate corporate decision making.\(^{161}\)

This compliance game is really a match of institutional appearances with some distinct characteristics, including the fact that the largest firms are spared prosecution due to perceived or at least expressed systemic risk; firms of any size and scale, whose prosecution does not pose a risk, are offered a crafted plea agreement; symbolic prosecutions of high profile defendants are sought, episodically, to assuage concerns over market fairness; and small

firms, those with limited access to counsel, are far, far more likely to be prosecuted to conviction. Ultimately, stakeholders in this game seek to protect and enhance their positions without disturbing the equilibrium and, remarkably, without concern for whether their efforts actually affect rates of offending behavior.

This is a game that seeks optimal compliance expenditures to minimize liability risks; gives all players moral and legal cover; placates constituencies with the appearance of legitimacy; and offers beautifully crafted images of leadership and governance with integrity. This game is aligned with a regulatory system that has very limited capacity for determining the effectiveness and genuineness of compliance, and even less commitment to aggressively using the corporate criminal law.162 This game encourages a mindless numbing of documentation, from due diligence forms, internal audits and training attendance records, to integrity affidavits.163 The more content in this documentation regime, the more paper, the less liability exposure for the firm. The quality of the representations in this regime is largely untested, by design.

Perhaps most important, this game is the centerpiece of a highly profitable and growing compliance and business ethics industry. Shining a much less-than-favorable light, it is also an industry with a potentially exploitive value proposition. At its core, the rules of the game assume that neither firms nor regulators have or want to have evidence of compliance effectiveness. The game further assumes that there is no interest in exploring whether the compliance machine actually affects behavior, organizational decision making, planning, programming, and corporate culture.164 Both parties seem inextricably captured by their opponent.

Prosecutors and regulators speak about the expectations of firm disclosures and cooperation but know about all the obvious conflicts.165 Prosecutors speak about guidelines, but their discretion is too constrained by limited resources, limits in the priority given to the investigation of corporate fraud, and significant challenges in obtaining evidence of serious corporate wrongdoing at the officer or board level, even with incentives for whistleblowers. The result: With countless billions spent with some of the

162 There is no shortage of commentary on compliance essentials, see Richard M. Steinberg, THE GAME CHANGES: 10 ESSENTIAL ELEMENTS FOR TRULY EFFECTIVE COMPLIANCE PROGRAMS (2012)

164 For an interesting take on corporate culture and corporate crime, see John Conley, and William M. O’Barr, Crime and Custom in Corporate Society: A Cultural Perspective on Corporate Misconduct, 60 LAW AND CONTEMPORARY PROBLEMS 5 (1997)
most impressive accountancies, consultancies, and law firms, it is practically impossible for regulators to make meaningful distinctions between and among ethical leaders and laggards, as well as compliant and non-compliant firms. And if one looks at the history of this game, it is hard not to see interested stakeholders pushing compliance spending forward in extreme and, at times, perverse ways.

Modern progressives must think about how this game may be disrupted; how the rules governing the regulatory status quo may be changed. The promise of progressivism is great, because this game turns on the relative power and suasion of informal social controls. This is a game about governance, where boards and senior management are kept too far apart, and the former know far too little about day-to-day compliance issues and challenges; culture and values, where the tone of corporate leadership is incredible to mid-level managers and employees; risk management, where the idea of risk is reduced to protecting the firm from its own employees; policies and procedures, where policies and codes are perfunctory and disconnected from operations; communication and training, where training programs are decontextualized, if not vacuous; monitoring and reporting, where firms are over controlled and reporting channels are limited; escalation, investigation, and discipline, where fear of retaliation is met with the reality of retaliation; issues management, where matters raised with compliance and audit are routinely neglected, and on-going improvements, where investment in the appearance of compliance and risk management highlight the compliance function.

Modern progressives must be mindful that the path out of the compliance game, inevitable as it appears to be, will likely cross with another inevitability: The inauthenticity of organizational and regulatory action. Corporate inauthenticity may be benign where the words from public affairs slightly outpace reality. Inside and outside of the compliance game, though, inauthenticity may be non-trivial. The problem of inauthenticity is

166 See William S. Laufer, Corporate Culpability and the Limits of Law, 6 BUSINESS ETHICS QUARTERLY 311 (1996)
167 See Richard M. Steinberg, THE GAME CHANGES: 10 ESSENTIAL ELEMENTS FOR TRULY EFFECTIVE COMPLIANCE PROGRAMS (2012)
168 Corporations may be said to fall along a behavioral continuum from opacity (i.e., where firms are characteristically obscure, elusive, and dense) to transparency (i.e., organizations that are open with communications, frank, candid, and forthcoming), sincerity (i.e., firms that act, as a means to an end, without pretense and dissimulation), and finally authenticity (i.e., companies that, as an end in itself, align their decisions, policies, and actions with actual desires, motivations, and intentions), see Laufer, supra note
169 Laufer, supra note at 26 (“Lurking behind the corporate scandals that now seem common place on Wall Street is an inauthenticity, a disconnect between what corporations say they do and what they actually do, that leads to public displays by top management of naive surprise when the public hears the news of a criminal investigation or indictment.”)
most concerning where significant regulatory responsibility is delegated and then shared with the firm, or where independent assessments of certain corporate representations are unavailable to both guardians and gatekeepers.\(^{170}\)

Just as the ethics industry markets compliance as commodities, the ingredients of both corporate pretense and posture are also bought and sold in a profitable consultant’s marketplace. Ethical intangibles are sold as tangibles in a world that increasingly looks for evidence of a good return on values, broadly defined.\(^{171}\) The selling of this instrumental brand of responsibility moves some stakeholders to invest in ways that result in a muddle of inauthenticity. Simply put, this muddle complicates and often confounds the very idea of self-regulation and co-regulation. And, to be fair, lack of authenticity may frustrate genuine efforts by government functionaries to be both measured and just.

In leading a constituency for greater corporate accountability, modern progressives should also assume the responsibility of inspiring firms to align their behavior, and the value they offer stakeholders, with who it is that they say they are.\(^{172}\) Countless examples of both misfeasance and malfeasance over the past century reveal the difference between a genuine commitment to ethics, integrity, and compliance, and the appearance, rhetoric, and spin of ethicality.\(^{173}\) This spin masks corporate efforts to avoid detection, deflect the need for more formal regulation, minimize compliance and governance costs and, at times, facilitate the laundering of questionable corporate decisions. In the end, the prospects of a modern progressive agenda disrupting and changing the rules of the compliance game may be challenged by something as simply conniving as a corporation’s inauthenticity.

### IV. THE PROMISE OF A PROGRESSIVE CORPORATE CRIMINAL LAW

Critics would be fair to say that there may be something instrumental in the resort to a progressive account of corporate criminal law. Having a modern progressive account at the table with the conventional guard, stalwart advocates, corporate libertarians, and normative thinkers is long overdue. The modern progressive case is much more than a call for empiricism or resort to

---

170 Laufer *supra* note 149

173 *Id*
the latest LegalTech or RegTech solutions to support the convergent growth and unprecedented investment in the compliance industry. It is also more than a vision of government regulation as both an “instrument” and “object” of reform. The conspicuous intransigence in this neglected body of law, marked by failure of any constituency to step forward to disrupt the compliance game, results in a certain kind of injustice, i.e., undistributed justice. Seeking recognition for this compromise of desert principles motivate a call to modern progressivism. Simply stated, the scales of justice must be balanced between corporate wrongdoing and our measured indignation.

Progressives today are well-suited to answer such a call as they are asked to resolve questions about the perennial tensions between regulatory power and increasing corporate power; the social control of business and the turn-of-the-twentieth-century notion of excessive individualism; and the economics of responsibility versus deference to the business community and its markets. How to regulate corporations fairly, justly, and without the specter of regulatory overreaching is a trite, old, but exceedingly important progressive question. That this question still defines the ongoing dissonance over how to conceive, practice, and enforce corporate criminal law is a powerful argument for modern progressives to come forward and make their case.

The progressive sentiment that corporations are more than simple profit engines for shareholders is promoted with a realization that the social control of businesses is increasingly plural, decentered, and the responsibility of both state and non-state actors. Markets reflect a growing complexity, well-captured by Braithwaite’s notion of “regulatory capitalism.”174 This complexity is more than a rudimentary migration away from command and control regulation in the developed world.175 Instead, commentators argue that with regulatory capitalism “a new division of labor between state and society (e.g., privatization) is accompanied by an increase in delegation, proliferation of new technologies of regulation, formalization of inter-institutional and intra-institutional relations, and the proliferation of mechanisms of self-regulation in the shadow of the state.”176

This division promotes some creative thinking about new ways of regulating, and about some possible modern progressive positions.177 After

175 J. Black, Decentering Regulation: Understanding the Role of Regulation and Self-Regulation in a “Postregulatory” World, 54 Curr. Legal Probl. 103 (2001)
176 Id at 13
177 Consider, for example, the move toward a shared or collaborative approach to regulation with the work of Michael C. Dorf & Charles F. Sabel, A Constitution of Democratic Experimentalism, 98 Colum. L. Rev. 267 (1998)
all, the role of science in new governance theory, dogma, and practice should be at the core of their case. So, too, is the commitment of governance theorists to a new institutional design, one that “relies on information-based and information-forcing techniques: specifically, reason-giving, transparent processes, benchmarking and outcome analysis, and shared information.”

But these kinds of idealized regulatory ingredients and designs are challenged by a fixed institutional architecture and the deeply embedded interests reflected in the existing oversight and administration of the corporate criminal law. There is no simple solution here.

Thinking about how science and the accelerated advance of regulatory technology may inform policies and practices is no longer what it once was. Plural and decentered conceptions of all variants of informal and formal constraint should move modern progressives to, for example, rethink how to conceptualize, operationalize, and measure compliance and what motivates compliance. Should compliance be conceived and measured as a complex enterprise problem between and among state and non-state regulatory stakeholders? If so, what kind of social controls will accommodate and fairly reflect the complexity of global business regulation in countries with and without a mature rule of law? The complexity of global business and markets would challenge the imagination of twentieth century progressive thinkers. A modern account of the progressive corporate criminal law must at least begin to capture this complexity and respond in measured ways.

---

179 Baer, supra note
181 John Braithwaite & Peter Drahos GLOBAL BUSINESS REGULATION (2000)
With the benefits of contemporary knowledge, century-old progressives would likely embrace research on how corporate structure, agency, and culture informs any theory of “meta-regulation.”\textsuperscript{182} Formal compliance systems would be evaluated for their content and structure, but in the larger context of the strategies, perceptions, and motivations of agents; the position of agents; and the overall culture of the firm.\textsuperscript{183} Reference would be made to the nodes that Parker identified as critical for corporations to successfully respond to regulatory demands: top management attention and response; development of professional compliance management; and employees’ internalization of compliance and communication.\textsuperscript{184}

Modern progressives would also address other challenges in regulating corporations.\textsuperscript{185} There are significant concerns over the risks and costs of regulatory delegation to private firms and, in particular, how firms might misuse this discretion.\textsuperscript{186} The idea of enforced self-regulation raises concerns over privatizing a public function.\textsuperscript{187} In fact, it raises another conundrum worthy of progressive contemplation. As Bamberger writes, there is a need to rely on the private sector for risk assessment and management.\textsuperscript{188} Failures of assessment and management, however, carry significant costs to both regulators and the regulated—and neither are well-equipped to minimize those costs.\textsuperscript{189}

\textsuperscript{182} Christine Parker, \textit{The Open Corporation: Effective Self-Regulation and Democracy} (2002)
\textsuperscript{184} See Christine Parker, \textit{The Open Corporation: Effective Self-Regulation and Democracy} (2002)
\textsuperscript{185} These considerations are an extrapolation of progressive dogma. See, Allan G. Cruchy, \textit{Government Intervention and the Social Control of Business: The Neoinstitutionalist Position}, 8 J. ECON. ISSUES 235, 238 (1974) (“Effective social control of business must take account of the efficiency, the power, and the value aspects of the problem of how to fit private business into the advanced industrial society if the issue is to be dealt with adequately.”)
\textsuperscript{186} Kenneth A. Bamberger, \textit{Regulation as Delegation: Private Firms, Decisionmaking, and Accountability in the Administrative State}, 56 DUKE L. J. 377 (2006)
\textsuperscript{188} \textit{Ibid}
\textsuperscript{189} \textit{Ibid} at 366
Modern progressives would, nevertheless, embrace compliance science and technology so that firms, regulators, and prosecutors move, as one, toward the objective of assessing organizational diligence and adjudicating non-compliance. At the same time, they would work toward the social control of corporates by state and non-state actors in measured and proportional ways. Progressives also would recognize the immense and unique power of the giants of industry, within and across all borders, to serve both private and public interests. And, finally, they would seek to maintain the trust and legitimacy of the criminal process, the sine qua non of regulatory regimes, by fairly allocating criminal justice resources toward all offenders, human and corporate. These reincarnate considerations, organized around some of the challenges posed by compliance science and social controls, are reflected below in thinking about a progressive corporate criminal law.

A. ROLE OF SCIENCE AND MARCH OF TECHNOLOGY

How science is situated in historical thinking about progressivism is defining. Economic institutions, policies, and practices—our economic order—should be founded on a scientific order that requires systematic observation and measurement. There is a carefully documented history that the scientific aspirations of progressives and institutionalists were also inextricably connected to the social control of business. The institutional arrangements that exert constraint on the economic order must not be based solely on expediency, symbolism, ideology and politics. Science and the scientific method are coextensive with sound regulatory policies and practices.

It is with this historical background that we ask how science informs, influences, and molds corporate criminal law relative to the regulatory investment in compliance. This is every bit a rhetorical question, because so much more compliance science is necessary to support and, at the same time,

---

190 See, e.g., William S. Laufer, The Importance of Cynicism and Humility: Anti-Corruption Partnerships and the Private Sector, 8 DEVELOPMENT OUTREACH 18 (2006)
191 This is a trend that is not only unjustifiable, but misses an opportunity for the United States to serve as an example to a host of countries that look for guidance during periods of law reform. See, Raymond J. Michalowski and Ronald C. Kramer, The Space Between Laws: The Problem of Corporate Crime in a Transnational Context, 34 SOCIAL PROBLEMS 34 (1987)
192 See, Malcolm Rutherford, Science and Social Control: The Institutionalist Movement in American Economics, 1918-1947, 3 ERASMUS JOURNAL FOR PHILOSOPHY AND ECONOMICS 47, 49 (2010) ("The concern with proper scientific methods was a concern to make economics more empirical and investigational, and to avoid the speculative and untestable nature of much orthodox theorizing.")
193 See, e.g., Rutherford, supra note and Clark, supra note at 221
justify the costs of corporate social controls, from the least formal (e.g., corporate codes of conduct and corporate culture) to the most formal (e.g., criminal law). This includes research on holistic and plural models of business compliance. It includes moving from conceptual and experimental models of machine learning applications to regulation, and the promised value, more generally, of LegalTech and RegTech. It also includes research that explores descriptive and inferential questions that, according to Parker and Nielsen, span four levels of analysis: (a) motives of agents (e.g., economic, social, and normative motives in support of an agent’s or firm’s decision or decision making), (b) organizational capacities, characteristics, and responses to regulation (e.g., internal firm resources, knowledge, leadership, and available technology), (c) how regulatory enforcement strategies and styles move organizations and their agents to respond (e.g., how regulatory institutions affect firm compliance), and (d) the effects of the external environment (i.e., social, political, and economic environment) on both regulators and the regulated.

The advent of enterprise models of compliance also invites compliance research across the entire organization. A rigorous internal (company) and external (government) management-based system of regulation should generate a large, impressive, and long-overdue body of research on corporate compliance that is both endogenous (i.e., exploring the construction and meaning of compliance as independent and dependent variable) and exogenous (i.e., using pre-existing, pre-defined constructions and meanings of compliance to address specific descriptive and causal research questions). Both kinds of research directly address concerns over the metrics used for measuring effectiveness across a wide range of regulatory approaches.

Perhaps most important, as seasoned compliance officers know all too well, successful implementation of formal compliance systems will require more than evidence of effective metrics and measures. The recipe for

---

194 These questions could be asked more broadly of all regulatory efforts with corporations, see Laufer and Robertson, supra note 111 at 1030.
195 Christine Parker and Vibeke L. Nielsen, The Challenge of Empirical Research on Business Compliance and Regulatory Capitalism, 5 ANNUAL REV. LAW SOC. SCI. 45 (2009) (these authors further classify exogenous research as operationalizing compliance by reference to attitudes and motivations; by reference to policy goals; as compliance behavior; and by observation of regulatory compliance behavior).
196 Id.
197 These metrics are the ingredients of meta-regulation, attempts to operationalize self-regulation, see: Christine Parker, THE OPEN CORPORATION: EFFECTIVE SELF-REGULATION AND DEMOCRACY (2002); Christine Parker and Vibeke L. Nielsen, Corporate Compliance Systems: Could They Make Any Difference? 41 ADMIN. & SOC. 3 (2008).
198 In addition to corporate cultures that resist compliance programming, there are concerns with “avoidance, resistance, ritualism and creative compliance.” See, Christine Parker and
successful compliance programs, research reveals, will hinge on “top management attention and motivation to implement a compliance system; the existence and strategies of specialized or professional compliance managers; and the way in which compliance systems are communicated to and experienced by the teams and individual workers that make up the organization.”  

Perceptions, motivations, and actions of compliance stakeholders do, indeed, matter. So, too, do the expectations of society and external stakeholders.

Conceptual models of corporate compliance that span individual, organizational, regulatory, and institutional levels reveal the complexity of the research enterprise—and how much more scholarship is needed. In particular, there is a great need to develop and test theories of regulation or components of theories. This is, admittedly, a challenge for a wide range of reasons, including the lack of data and the complexity of regulatory instruments. While modern progressives would strongly support meeting these challenges, they would, at the same time, look beyond the conventional challenges and explanations for what is known and not known about compliance.

199 Id at 172-173 (2011)  

202 See, e.g., Parker and Nielsen’s model, supra note at 5  

203 Some of the challenges and difficulties posed by empirical research on compliance are addressed by Parker and Nielsen, supra note at 6 (challenges and difficulties include access to data; complexity, range, and interrelatedness of compliance constructs; and the impracticality of testing grand theories). See also, Sally Simpson, White-Collar Crime: A Review of Recent Developments and Promising Directions for Future Research, 39 ANN. REV. OF SOCIOLOGY 1 (2013)
Systematic evaluation research on corporate crime deterrence, what little there is of it, suggests the possible perils of making regulatory policies, no less confident hypotheses, without well-executed randomized controlled experiments, good longitudinal data, time series analyses, and case studies that provide rich qualitative data. In the only meta-review of corporate regulation, it seems as if regulatory policies produce as much defiance as compliance. And the more rigorous the method and design of the research project, the less of a deterrent effect obtained. Notably, those firms who adhered to multiple legal interventions (i.e., enforcement, monitoring, and inspections) were more likely to be deterred, whereas firms experiencing single intervention strategies were less likely.

All conclusions found in this meta-review were cast as quite tentative, though, because of limited data and scarcity of rigorous research. The authors were more confident in concluding that there is simply insufficient evidence that law actually deters corporate offending. One commentator writing about the meta-review hoped that this analysis would be “…a loud wake-up call for corporate crime researchers to start getting their methodological, conceptual, and analytical house in order.” Another commentator was equally as grim in calling for better impact assessment research with replications. Studies are needed across institutional and organizational contexts. The status quo, commentators note, is literally regulating in the dark.

B. BEYOND THE COMPLIANCE CONUNDRUM

205 Id at 410 (“We need to undertake more focused and high-quality (particularly randomized experiments or quasi-experiments) focused on program-specific interventions (with replications). Until then, the answer to the question of what works, what doesn’t, and what’s promising in the area of corporate deterrence will remain elusive.”)
Judging the effectiveness of compliance efforts on organizations is said to be one of the more elusive if not daunting regulatory challenges.208 This challenge is certainly recognized by the modern progressive account. As noted earlier, this embrace of empirics is confounded by increasing concerns in the private sector that a more careful, technology-driven and, indeed, scientific consideration of compliance would result in expectations of “voluntary” disclosures to regulators and prosecutors. This is what I call a true compliance conundrum.209

That there is such a conundrum should not come as a surprise to regulators and prosecutors. The standard refrain continues to be: In the absence of clear guidance from government functionaries as to what are, in fact, effective compliance systems and compliance programs, generating and applying a science of compliance will be shunned by those general counsel, corporate counsel, and white collar criminal defense counsel who are even minimally risk-adverse.210 Shunned even though all stakeholders know that ever-increasing compliance costs, to be justified, must be supported by well-conceived internal plans that meet or exceed regulatory criteria and expectations. Shunned, even though regulators and prosecutors admit that their proxies for compliance effectiveness are most often no better than intuitive and experiential—that their confidence in a firm actually exercising due diligence, good governance, and reasonable risk management is, in fact, faith-filled. Simply stated, the choice is not so difficult if it is between disclosure and cooperation with law enforcement, or the in-house handling of inculpatory evidence from those who do compliance data analytics.

Regulatory and administrative law scholars would find this conundrum to be part of a larger problem of the delegation of regulatory discretion.211 This delegation, some conclude, often makes a mess of compliance norms, expectations, and incentives. There is simply insufficient guidance for the regulated, combined with a lack of recognition of sound compliance programs that reveal non-compliance. Add to this the reticence

208 See, e.g., Vibeke L. Nielsen and Christine Parker. Mixed Motives: Economic, Social, and Normative Motivations in Business Compliance. 34 LAW & POLICY 428 (2012). Adan Nieto supra note 3. paints a nuanced portrait of the complications associated with ensuring against cosmetic compliance (e.g., lack of legal certainty for regulated firms and lack of trust of compliance programs by regulators). Nieto then offers a critique of the remedies against cosmetic compliance, including certification and standardization.

211 See Bamberger, Id at 388
of prosecutors to get into the business of making nuanced judgments about the effectiveness and completeness of integrity, ethics, and compliance efforts. One is hard pressed to find a genuine desire for regulatory capacity building in government agencies and departments, at least one even remotely comparable to the convergence of investments by private sector compliance stakeholders.

The recent announcement of a compliance counsel appointed to the Fraud Section of the Criminal Division of the Department of Justice is a surprising admission that expertise in compliance metrics were until only recently missing in the discretionary calculus of federal prosecutors. Unless modern progressives seize this opportunity that this convergence provides, it is fair to conclude that intuition and experiential evidence will continue to guide prosecutorial discretion. Prosecutors are simply not compliance professionals, as we are told by the Department of Justice, and the best that can be done is to ask a seasoned Main Justice compliance professional for a “reality check.”212 This reality check will be determined by such a professional with reference to some very familiar due diligence factors. These include the need to be reasonably proactive and reactive, the importance of organizational climate, and communication and enforcement of standards, among others.213

Due diligence factors broadly offer guidance but, without more, are intuitions and hypotheses about the behavior of persons and organizations that leave firms conflicted about pursuing systematic evaluations.214 In the end, these factors are an invitation to make additional investments in a wide range of compliance solutions that, most often, are critically evaluated for their efficacy only when there is a notable event of non-compliance that inadvertently or advertently comes to the attention of regulators or prosecutors.215

212 See, Leslie R. Caldwell, Remarks, SIFMA Compliance and Legal Society, New York Regional Seminar (November 2, 2015) (“Our goal is to have someone who can provide what I’ll call a “reality check.”) (Available at: https://www.justice.gov/opa/speech/assistant-attorney-general-leslie-r-caldwell-speaks-sifma-compliance-and-legal-society)

213 These factors are derived from the pillars of diligence first announced in the Defense Industry Initiative (DII), subsequently enshrined in Chapter Eight of the Sentencing Guidelines for Organizations, and ultimately spun off into a series of iterative memoranda from the Department of Justice, i.e., the Holder, McNulty, Thompson, and Filip Memoranda.214 For a discussion of the history of compliance beginning with the Defense Industry Initiative (DII), see Laufer, supra note 2 at .

214 For a discussion of the history of compliance beginning with the Defense Industry Initiative (DII), see Laufer, supra note 2 at .

215 Miriam Baer captures the process well in writing that extant practice “…is at best an illusory delegation of responsibility whereby the government commands firms ex ante to implement “effective” compliance programs, but offers little practical guidance for determining effectiveness, and intentionally leaves them very little room for discretion in the event that such programs uncover violations of law.” Baer, supra note 2 at 954
Modest suggestions for addressing the conundrum should acknowledge the complexity of compliance regimes in large institutions, including the iterative process of determining a regulator’s discretionary expectations for corporate compliance; the regulatory challenges of monitoring firm compliance over time; the challenge of training employees to conform to articulated legal risks; and the increasing suasion of self-regulatory associations. All suggestions should also address how this conundrum, along with any trading of regulator/regulated favors, fit in the long-awaited for partnership between the government and corporations.

First conceived as the “good corporate citizen” movement more than two decades ago, this partnership was designed to reasonably share regulatory burdens by firms and criminal justice functionaries. For this partnership to be successful, regulators would shoulder the burden of providing clear guidance as to the kind and quality of compliance metrics required for the ethical and legal risks assumed by the firms they regulate, i.e., going beyond the simple prescription that firms must invest in sophisticated risk assessments; maintain clear policies, standards, and procedures; engage in effective training and communication; regularly test compliance monitoring and auditing; perform thorough internal and external investigations; and promote a culture of compliance.

What these suggestions miss, however, are the distinct limitations of seeing compliance exclusively in performance terms with specific outcome metrics. In fact, any focus on performance metrics alone fuels the compliance conundrum, exploiting the lack of a systematic compliance science and data, and neglecting the fact that a firm’s compliance with law is often not entirely reducible to any narrow construction of compliance performance at a single level of analysis. As Parker writes, it is wrong to assume that changes in behavior are necessarily the product of new or changing compliance systems.

217 PROCEEDINGS OF THE SECOND SYMPOSIUM OF CRIME AND PUNISHMENT IN THE UNITED STATES, CORPORATE CRIME IN AMERICA: STRENGTHENING THE “GOOD CITIZEN” CORPORATION (Sept. 7-8, 1995). For a critical take on this movement, see, e.g., Laufer supra note 28; Laufer, supra note 157

218 Of these, creating an ethical corporate culture is most challenging. See, e.g., Amber L. Seligson and Laurie Choi, CRITICAL ELEMENTS OF AN ORGANIZATIONAL ETHICAL CULTURE 7-8 (2006) (Ethical culture may be captured by 18 factors)

219 See., Warren, Gaspar, and Laufer, supra note 72 (Bank employees were surveyed before and after the introduction of formal ethics training—an important component of formal ethics programs—to examine the effects of training on ethical organizational culture.)

V. REVISITING THE MODERN PROGRESSIVE AGENDA

The modern progressive agenda is often broadly defined by the pursuit of individual freedom; freedom from undue government interference; the opportunity to work toward economic and civic success; taking personal

---

220 See, Neal Shover and Andy Hochstetler, Cultural Explanation and Organizational Crime, 37 CRIME, LAW & SOC. CHANGE 1 (2002)
221 For a discussion of the successes and challenges of these management systems, see Cary Coglianese and Jennifer Nash (eds.), REGULATING FROM THE INSIDE: CAN ENVIRONMENTAL MANAGEMENT SYSTEMS ACHIEVE POLICY GOALS? (2001)
225 For early calls for corporate monitoring from a special seat on the board, see: Christopher Stone, WHERE THE LAW ENDS: THE SOCIAL CONTROL OF CORPORATE BEHAVIOR 174-183 (1975)
responsibility, and a sense of responsibility to others.\textsuperscript{226} Modern progressive issues revolve around jobs and the economy; taxes and deficits; health care, social security and Medicare; education; immigration; environmental, climate and energy policy; reproductive rights and health; money in politics; and gay rights and marriage equality.\textsuperscript{227}

Matters of corporate responsibility, accountability, and justice are the subject of vociferous advocacy over what it means to break up the big banks; separate commercial and investment banking by bringing back a replica of the Glass–Steagall Act (Banking Act of 1933); enact financial speculation taxes; limit executive compensation; and use principles and practices of collective civil disobedience to “occupy” Wall Street.\textsuperscript{228} This advocacy attaches to the core progressive idea of “taming the giant corporation” that dominated progressive dogma in the 1970s and 1980s. Calls from Ralph Nader for federal incorporation laws, and Christopher Stone for general and special public directors, inspired a share of the new progressive agenda.\textsuperscript{229}

In recognition of the harm flowing from serious wrongdoing of the largest businesses, progressives see corporations as artificial entities whose domination and unconstrained power has now crept into every aspect of life. This power has a damaging hold on the political process. We live in a near corporate state, modern progressives say, where our most significant issue should be how to best constrain, disable, and disassemble the largest private institutions that have so successfully aggregated corporate power. Something must be done to address the disconnect between the interests of Wall Street and a law-abiding, honorable if not selfless Main Street.

If this generation of progressives will be the constituency supporting a measured and just corporate criminal law, they will have to know where to best direct government and corporate controls. This means balancing the value of abolishing corporate personhood with the importance of personhood for the attribution of criminal liability. This also means sharing the power of informal social controls between regulators and the regulated, as co-regulators, using leading enterprise technology; accepting the increasing delegation and, thus, privatization of public regulation with increasingly

\textsuperscript{227} See, John Nichols, Elizabeth Warren Offers Democrats More Than a 2016 Candidacy—She Offers a 2014 Agenda, The Nation, July 19, 2014 (“We believe that Wall Street needs stronger rules and tougher enforcement, and we're willing to fight for it.”) (available at: https://www.thenation.com/article/elizabeth-warren-offers-democrats-more-2016-candidacy-she-offers-2014-agenda/)

\textsuperscript{228} Id

plural and decentered models of regulation; and recognizing how a progressive corporate criminal law will apply to enterprises of all sizes and ownership status.

It also means thinking about how modern progressive advocacy is affected by criminal justice strategies that, according to some, make black lives all but incidental. Neoconservative policing strategies characterized by containment, surveillance, pacification, and deception may meet law enforcement objectives but, at the same time, risk racial injustice. Aggressive urban police policies and practices, modern progressives might argue, target precious criminal justice resources, a reasonable percentage of which could and should be used to combat corporate wrongdoing by companies of all sizes. Our malevolent portrait of street criminals, the “badness” of street-level wrongdoing, contribute to a concentration of criminal justice attention and resources away from more aggressive investigation and prosecution of corporates. These and other challenges to the modern progressive agenda are briefly detailed below, concluding with a reflection on how the rules of the compliance game would change with a little nudge from modern progressives.

A. THE BRIDGE FROM OLD TO NEW

Casting a dark shadow on the ethics and integrity of big business may successfully connect old and new ideologies. It is a very satisfying rant for all of the obvious reasons. At the same time, assuming that evil comes from all businesses is a lazy and distorted caricature. Progressives of old did much to unpack the value that different forms of constraint have on creating and successfully sustaining order within firms. Asking how social controls promote prosocial corporate behavior falls within the province of modern progressives as well.

Progressives today have a significant stake in how compliance requirements are conceived, integrated into organizations, and evaluated for

---

234 So, too, is charting a progressive course of corporate social responsibility. See Greenfield, supra note
their efficacy and effectiveness. Their failure to be true to their history, by actively exploring the disconnect between functioning institutions of social control and powerful corporations, diminishes the legitimacy of their calls for dismantling large financial institutions. Modern progressives should be leading this convergence of compliance solutions to reduce corporate deviance, and to disrupt the perennial game of compliance. Modern progressives also should be studying how this convergence may, at times, produce overly controlled and rigid workplaces. And modern progressives should be exploring how the use of both informal and formal social controls may more meaningfully connect to the characterization of corporations as moral agents and as persons.

In an effort to undo the grant of corporate constitutional rights, modern progressives regularly and consistently attack the very idea of personhood. Corporate personhood unfairly transforms the concept of property and unjustly limits liability. The idea of corporate personhood is inextricably tied to the evils associated with globalization, the dominance of corporate power, unjust wealth concentration, and an all-encompassing neoliberal disingenuity. Modern progressives also worry about how large corporations epitomize corruption in modern form. Modern progressives join populists, and others to the left, in recoiling at our corporate economy and corporate society. Some go so far as to think that we are inching toward fascism with the rise of corporate control over the legislative and now executive branch, significantly diminishing civic power.

The deeply-held views of modern progressives on personhood in this post–Citizen’s United period complicate any substantive reform of corporate

---

239 For a discussion of big business and “Corporate” America, see McGerr supra note at 147-181
criminal law. So, too, does the defining role of personhood in reproductive rights, more generally. Personhood statutes and initiatives are weapons of abortion foes. All of these invectives beg the question: How corporate personhood could be abolished as a matter of progressive principles, while accepting that part of the criminal law that generally looks to, if not requires, the very qualities and characteristics associated with personhood. With the narrow exception of strict liability offenses, the fault requirements of federal and state criminal codes extend a distinct human form and logic to the persona ficta of a corporation. The corporate person is, in essence, more than a simple construction or empty metaphor. For progressives it is a facilitative legal fiction that allows criminal law principles to be attributed to culpable and, thus, deserving entities. Abolishing personhood may be the perfect revenge for corporate evils. At the same time, though, undermining this fiction would likely diminish the role and suasion of the most formal of social controls to address this evil.

Modern progressives face a difficult dilemma. Take away the person, and principles of corporate criminal law must be formally recast. Abolish personhood and one might have to reconstruct any responsive regulatory architecture, straining to find a place for the benign big gun. The analytic challenge is exceptionally difficult if one is committed to a consistent conception of personhood across the criminal law. How should modern

242 See Walt and Laufer, supra note 7
243 See, e.g., Stone supra note at 3
245 For a comparable argument, see Kent Greenfield, Let Us Now Praise Corporate Persons, WASHINGTON MONTHLY, January/February, 2015 (available at: http://washingtonmonthly .com/magazine/janfeb-2015/let-us-now-praise-corporate-persons/); (“But the attack on corporate personhood is a mistake. And it may, ironically, be playing into the hands of the financial and managerial elite. What’s the best way to control corporate power? More corporate personhood, not less.”)
246 In fairness, while some courts find personhood to be incidental, most corporate criminal prosecutions assume certain relational properties commonly associated with personhood. For example, see State v. Knutson (537 NW 2d 420, 196 Wis. 2d 86 (1995)) (“…it is not in virtue of being a person that criminal liability attaches. It is in virtue of possessing the complex relational property of causing harm-voluntarily-with a wrongful state of mind-without excuse.”) See also, Walt and Laufer, supra note 7
247 This raises the more general question of why the "personhood" epithet must be employed consistently. Perhaps different parts of the criminal law might apply to corporations differently because the interests at stake are different? Why create a useful heuristic (personhood) and then use it many different contexts where it may not be useful? Both are
progressives inherit the old progressive’s consternation over organizational personhood? Practically, there is no need to ask whether the progressive call for strengthening the regulatory system may be satisfied while at the same time abolishing the fictional form that allows for liability. Modern progressives benefit from parallel fault standards that allow for prosecutions of either human or corporate persons, or both.\textsuperscript{248} The Yates Memorandum distracts attention from well-settled principles that, recognizing the corporation as an entity subject to criminal law, prosecutors have the discretion to proceed in parallel or proceed separately.\textsuperscript{249} Strategic considerations account for variations in prosecutorial behavior, with a distinct preference for individual cases well before Yates.\textsuperscript{250}

Changes to the general part of the corporate criminal law over the past century are nearly impossible to find. In place of successful corporate criminal law reform, a legion of strange bedfellows have battled over corporate metaphysics, moral agency, what it means to for a company to have a “soul” and be culpable or liable.\textsuperscript{251} These battles are undeniably engaging.

good questions that are not answered by the tendency of courts and legislatures to reflexively resort to personhood heuristics or person-based analogies.

\textsuperscript{248} See, e.g., John Dewey, \textit{The Historic Background of Corporate Legal Personality}, 35 YALE L.J. 655, 658 (1926) (“[B]efore anything can be a jural person it must intrinsically possess certain properties, the existence of which is necessary to constitute anything a person.”) The strategic use of parallel civil and criminal proceedings has been discussed at length, see: \textit{Corporate Crime: Regulating Corporate Behavior Through Criminal Sanctions}, 92 HARV. L. REV. 1227, 1333-40 (1979).

\textsuperscript{249} See, \textbf{PRINCIPLES OF FEDERAL PROSECUTION OF BUSINESS ORGANIZATIONS} 2 (2008) (available at: https://www.justice.gov/sites/default/files/dag/legacy/2008/11/03/dag-memo-08282008.pdf) (“Where a decision is made to charge a corporation, it does not necessarily follow that individual directors, officers, employees, or shareholders should not also be charged. Prosecution of a corporation is not a substitute for the prosecution of criminally culpable individuals within or without the corporation.”) It is interesting to note that outside of the United States, there is an ongoing debate over the implications of ne bis in idem in proceeding against both “legal” and human persons, see: Dominik Brodowski, \textit{Minimum Procedural Rights for Corporations in Corporate Criminal Procedure}, in Brodowski, D., Espinoza de los Monteros de la Parr, Tiedemann, K., Vogel, J. (Eds.) \textit{REGULATING CORPORATE CRIMINAL LIABILITY} 211-225 (2014)

\textsuperscript{250} Id at 5. The Yates Memo signals that liability risk for firms should be conceived in terms of an individual agent’s non-compliance. No prosecution of a corporation will result unless there is prima facie evidence of an agent’s fault. The result for compliance officers is simple: Focusing resources on organizational fault is unresponsive to this regulatory prescription. To be responsive, firms should focus attention on the acts and omissions of individual agents. The compliance function is justifiably tied to regulatory prescriptions. Elsewhere, it was argued that changes in requirement of the general part of the corporate criminal law, invite congruence or consistency problems. See, William S. Laufer and Alan Strudler, \textit{Corporate Crime and Making Amends}, 44 AM. CRIM. L. REV. 1307 (2007)

\textsuperscript{251} See, Eric Orts and Craig Smith (eds.), \textit{THE MORAL RESPONSIBILITY OF FIRMS} (2017); Peter A. French, \textit{COLLECTIVE AND CORPORATE RESPONSIBILITY} (1984); Margaret Gilbert,
and so very longstanding. With no metrics for progress made, and no inspired law reform to show, however, statutory and decisional law is left to rest in a state of doctrinal decay.

It is also true that a wide range of proposed entity fault standards were left on the table that show promise for more meaningful and genuine determinations of fault. These determinations turn on connections between the decisions, actions, and inactions of agents, and the quality and characteristics of the firm. More relevant to the progressive case, these "genuine" fault standards tend to facilitate reasonable attributions of fault.

Modern progressives should seize the opportunity for greater corporate accountability and push for the adoption of culpability and liability standards that conceive of fault as an entity’s acts and intentionality; a function of an agent’s status in the corporate hierarchy; a collection of intentions; or the nature of an agent’s relationship to the principal. Constructive corporate fault, corporate character and culture theory, and proactive/reactive fault are also candidates for liability and culpability standards that are organizational in nature.

Progressives might, for example, adopt a corporate liability standard that conceives of fault as an entity’s acts and intentionality or perhaps a function of an agent’s relationship to the principal. This approach is consistent with a constructive corporate liability. A constructive corporate liability and culpability exists where there is proof of: (1) an illegal corporate act, and (2) a concurrent corporate criminal state of mind. The former requirement may be satisfied by evidence of a primary act—an act that is owned or authored by the corporation. Primary action may be identified through an objective test where it is determined that given the size, complexity, formality, functionality, decisionmaking process, and structure of the corporate organization, it is reasonable to conclude that the agents' acts are the actions of the corporation. This reasonableness test is a threshold

252 See, Max Radin, The Endless Problem of Corporate Personality, 32 COLUM. L. REV. 643 (1932); for a recent treatment on agency questions, see Eric Orts and Craig Smith (eds.), THE MORAL RESPONSIBILITY OF FIRMS (2017)

253 See infra notes to

255 See Laufer, supra note 2
assessment that serves to separate those cases in which primary corporate acts have occurred, from those appropriately considered as individual non-corporate acts (or secondary acts). Constructive corporate fault replaces vicarious liability with a constructive test of primary corporate action.

Any reasonable departure from corporate vicarious liability, it seems, would be preferred by modern progressives. Principles of vicarious fault are simply too difficult and costly to apply to agents of large and powerful corporations. The larger the organization, the more likely that the agent’s acts and intents are attenuated; the more likely that there are relevant policies, procedures, and training that further disconnect the wrongdoing from the corporation’s diligence; the more likely that corporations would engage in “reverse whistleblowing,” and the more likely that for reasons of sheer size and steady base-rates of deviance, vicarious fault would apply to far too many agents to be both reasonable and practical. 256

B. TAMING THE GIANT CORPORATION?

Targeting and taming giant corporations excite progressives of old and new stripes. There are many good reasons to attend to iconic companies of great scale, from their market and political power, to the lasting effects of their ethical and legal violations. 257 The largest private sector actors powerfully influence both regulation and any attribution of criminal responsibility. 258 Corporations are deft at undermining legislative efforts to limit industry self-regulation and firm self-governance. What remains of corporate crime reforms often have as much to do with the use of corporate power as the congressional intent behind the legislation. 259 Corporate political influence is a longstanding and sustained concern of progressives. 256

Classic research by Marshall Clinard and Peter Yeager in 1979 revealed that wrongdoing is generously distributed in the largest

256 See Laufer supra note 5 for a discussion of corporate scapegoating (called “reverse whistleblowing”) by deflecting blame to low-level employees.

257 See, Nader, supra note at 7. There is a long history to the progressive’s concern with big business. See, e.g., McGerr supra note at 151 (“The rise of large-scale corporations was unsettling, even frightening. Big business, as one newspaper warned, could well “lead to one of the greatest upheavals that has been witnessed in modern history.””). See also, Charles A. Moore, Taming the Giant Corporation? Some Cautionary Remarks on the Deterrability of Corporate Crime, 33 CRIME & DELINQUENCY 379 (1987)

258 Thomas M. Jones, Corporate Governance: Who Controls the Large Corporation, 30 HASTINGS LJ 1261 (1978)

259 See Vikramaditya S. Khanna, Corporate Crime Legislation: A Political Economy Analysis, 82 WASH. U. L. Q. 95 (2004); Laufer, supra note 2

companies. Many years of employee surveys from large firms confirm high base rates, much of which is washed through non-reporting or management inertia. Giant corporations also benefit significantly by a multi-tier system of corporate criminal justice, one in which only small companies, where owners had direct knowledge of the illegalities, are generally prosecuted to conviction. Larger corporations are often diverted from the criminal process into deferred prosecution agreements, non-prosecution agreements, and corporate integrity agreements. A small number of the largest corporations, those that offer something quite important or strategic—or whose existence is systemically important—are simply too big to indict, prosecute, take to trial, and convict. Nowhere is this more apparent than in the torpor to bring criminal cases against the largest financial institutions for wrongdoing during the subprime crisis.

There is an obvious and justifiable attraction to think of business crimes and organizational wrongdoing as the province of giant corporations. Part of the lure comes from very real concerns over concentrated resources, the simple power and scale to do wrong, boundless capabilities to deflect and defend any accusation, access to extant regulatory strategy, and the difficulty of obtaining inculpatory evidence given the complexity of the corporate form. The other part of the lure is the sheer scale of their economies in comparison to other, different kinds of economies.

There is some risk, though, in uncritically accepting archetypal images of the largest private sector institutions, especially when conceiving corporate crime policy. At times, too little reflection is given to the variety of iconic images of corporations that do wrong. It is not only that there are many different types of corporations, many different kinds of corporate cultures, and sustained base rates of deviance in all. It is not that big businesses who do wrong are less deserving of blame. The real risk is that such images make too convincing a case that regulatory attention should focus only on giant corporations and that all giant corporations are, in progressive terminology,

---

261 Clinard and Yeager, supra note
262 Laufer, supra note 2
263 See, Brandon L. Garrett, Too Big to Jail: How Prosecutors Compromise with Corporations (2014)
264 Id at
265 See, Committee on Financial Services, U.S. House of Representatives, Too Big to Jail: Inside the Obama Justice Department’s Decision Not to Hold Wall Street Accountable: Report Prepared by the Republ ication Staff of the Committee on Financial Services, July 11, 2016

evil. It is unfortunate that old and modern progressives are guilty of seducing and being seduced by symbolic imagery, as much as big business and government functionaries.

The near-exclusive focus by progressives on the giants of industry is also not justified by any evidence of greater rates of deviance in the largest corporations. On the contrary, in small to medium sized enterprises (“SMEs”), those with few resources to commit to compliance policies and programs, the rates of wrongdoing are likely as high, if not higher.\(^{268}\) Certainly, regulatory disclosure requirements decrease appreciably in SMEs, in particular in the nearly 30 million small businesses in the United States.\(^{269}\)

Images that target and tame giant corporate wrongdoing, on occasion, carry the neoconser

vative and neoliberal baggage of over-criminalization.\(^{270}\) The time is long overdue for modern progressives to reposition the policing of all corporate crimes as a problem of under-criminalization and under-enforcement.\(^{271}\) After all, the use of the criminal law with corporations remains a very rare event in the criminal justice system—with large and small corporations.

Modern progressives are left with several avenues for justice, and one can hope that this movement will transcend objections and follow in the footsteps of both history and tradition. Progressive proposals for federal chartering of the largest and most powerful corporations suggest that this transcendence is possible.\(^{272}\) The case for federal chartering is premised on the failure of individual accountability; the unparalleled impact of big

\(^{269}\) For a fascinating discussion of the challenges of self-regulation and wrongdoing in small businesses, see: Robyn Fairman and Charlotte Yapp, Enforced Self-Regulation, Prescription, and Conceptions of Compliance within Small Businesses: The Impact of Enforcement, 27 LAW & POLICY 491 (2005)

businesses on markets; the failure of state chartering laws to reign in corporate abuses; marked failures of corporate disclosures; and market concentration that protects against fair competition. The chartering proposals, while unsuccessful, offered modern progressives a powerful vector for a more ambitious reform agenda.

CONCLUSION

If the century-old-history of corporate criminal law is any guide, our regulatory destiny is bounded by a repeated episodic pattern. Start with a period of regulatory laxity, followed by a period of “unprecedented” corporate scandals, heightened regulatory scrutiny, then legislative reforms, followed by targeted lobbying and legislative amendments, ending, once again, with an uncertain time of regulatory laxity. That there is no modern progressive account of corporate criminal law is a missed opportunity to disrupt the regularity of this century old pattern of recurring scandals and reforms. This disruption might ensure the integrity and longevity of corporate crime reforms, move the priority given to corporate criminal law enforcement and prosecution, push lawmakers toward greater accountability for corporate wrongdoing and, all along, promote the proper measure of social controls with a commitment to science.

Modern progressives inherit the tradition of using science to fashion a fair and just sociology of social control. Raising a progressive voice at a time of a convergence in compliance science, disruptive technology, methods, and standards would countenance the founding ideas of progressivism. There is also immeasurable value in hearing a loud progressive voice when the politics of the moment place much of the regulatory reforms of the past two decades at risk.

This is a time when the voices of modern progressives should compete with the stalwart advocates, corporate libertarians, and those of other ideologies in defining compliance constructs and principles. The days of faint speech at the margins should be over. Entering a more robust debate over corporate accountability is no short order given the highly bounded nature of disciplinary methods, journals, and intellectual exchanges. To have impact

273 Id

275 Laufer, supra note 2 at
on the content and contours of corporate criminal law, proponents must speak in ways that engage policy makers as active partners in this competition.\textsuperscript{276}

The good news is that modern progressives know that there is an inevitability to the development of increasingly integrated regulatory instruments; an inevitability to more sophisticated enterprise wide systems; an inevitability to the widespread adoption of plural and decentered, non-state regulatory solutions, and an inevitability to some kind of fair and just international regulatory regime. And modern progressives are uniquely positioned to understand what the inevitability of progress might mean for the future of corporate criminal justice.\textsuperscript{277}

\textsuperscript{277} The future prospects of a science of corporate criminal justice was recently discussed at the National Academy of Sciences, see Committee on Law and Justice and Zicklin Center of the Wharton School, \textit{Planning Meeting on Corporate Criminal Justice} (2015). Claims about the inevitability of the progress of science are made with an appreciation for positions other than that of the inevitabilist. See, e.g., Ian Hacking, \textit{How Inevitable are the Results of Successful Science?} 67 Philosophy of Science 89 (2000); Katherina Kinzel, \textit{State of the field: Are the Results of Science Contingent or Inevitable?} 52 Studies in History and Philosophy of Science 55 (2015); Lena Soler, \textit{Are the Results of Our Science Contingent of Inevitable?} 39 Studies in the History and Philosophy of Science 221 (2008); Lena Soler, \textit{Revealing the Analytical Structure and Some Intrinsic Major Difficulties of the Contingentist/Ideentibilist Issue}, 39 Studies in the History and Philosophy of Science 230 (2008); Howard Sankey, \textit{Scientific Realism and the Inevitability of Science}, 39 Studies in History and Philosophy of Science 259 (2008)
